development as well as teacher education *Global Perspectives on Online Education During a Time of Emergency: Conditions, Contexts and Critiques* Patricia Marybelle Davies, 2025-02-18 *Global Perspectives on Online Education During a Time of Emergency* presents viewpoints on the unprecedented shift to online education as a result of the COVID 19 pandemic. It aims to broaden and deepen readers' understanding of studies that could better address academic issues related to teaching and learning online. The pandemic triggered the disruption of national educational systems and a rapid transition to online education, but there were few guidelines on how to proceed. Consequently, the role of educational technologies and distinctions between formal and informal learning became blurred. Greenhow, Lewin, 2016. This volume examines how educators adopted new pedagogical practices adapted to flexible working environments and tackled new technologies to maintain educational systems following the global outbreak of the coronavirus. It showcases innovative practices and critiques several learning theories of online education. The chapters are developed using two main approaches: empirical investigations and reviews of existing research. The empirical chapters present significant new findings of broad relevance. The review chapters use established studies to describe recent developments of broad significance and highlight unresolved questions and future directions. The volume as a whole provides research-based insights on evidence on the contexts and conditions of the emergency transition to online education worldwide and useful recommendations on emergent directions in online education. This is a vital text for educational researchers, technologists, and practitioners. It includes empirical data, theoretical questions, and methodological approaches addressing online education. The volume explores flexible learning, alternative pedagogical practices, and changes in digital environments, examining futuristic approaches at a crucial moment of global reform in online education.

Mathematical Work in Educational Context Alain Kuzniak, Elizabeth Montoya-Delgadillo, Philippe R. Richard, 2022-03-31 This book is a friendly and complete introduction to one of the most comprehensive contemporary theories of mathematics teaching and learning. By focusing on mathematical work performed by students and teachers during mathematics sessions, the theory of Mathematical Workings Spaces (MWS) has opened up new perspectives and avenues on mathematics education and mathematical thinking. In particular, it enables the identification of students' knowledge production processes and helps teachers to shape them. The first part of the book explores the heart of the theory and aims to further describe and understand epistemological and cognitive aspects of mathematical work. The second part develops the different MWS dedicated to observing how this work depends on the expectations of educational systems, how it is formed and taught, and how individuals appropriate it. In the last part, some applications and perspectives are discussed regarding topics of major importance today in mathematics education, which relate to technological and digital tools, teacher training, and modeling activities. In line with the spirit of the theory, the book was written to reflect the conceptual unity at the heart of the theory of MWS and at the same time to show the freedom and diversity of approaches given space therein. Written for researchers and professionals in mathematics education, it offers plenty of concrete examples.
