Stochastic Approaches To Water Reso 2vol:

Nested algorithms for optimal reservoir operation and their embedding in a decision support platform Blagoj Delipetrev, 2020-04-30 Reservoir operation is a multi objective optimization problem and is traditionally solved with dynamic programming DP and stochastic dynamic programming SDP algorithms The thesis presents novel algorithms for optimal reservoir operation named nested DP nDP nested SDP nSDP nested reinforcement learning nRL and their multi objective MO variants correspondingly MOnDP MOnSDP and MOnRL The idea is to include a nested optimization algorithm into each state transition which reduces the initial problem dimension and alleviates the curse of dimensionality These algorithms can solve multi objective optimization problems without significantly increasing the algorithm complexity or the computational expenses It can additionally handle dense and irregular variable discretization All algorithms are coded in Java and were tested on the case study of the Knezevo reservoir in the Republic of Macedonia Nested optimization algorithms are embedded in a cloud application platform for water resources modeling and optimization The platform is available 24/7 accessible from everywhere scalable distributed interoperable and it creates a real time multiuser collaboration platform This thesis contributes with new and more powerful algorithms for an optimal reservoir operation and cloud application platform All source codes are available for public use and can be used by researchers and practitioners to further advance the mentioned areas

Lending Division, 1980 Water Resources and Reservoir Engineering British Dam Society. Conference, 1992 This volume explores the current issues and recent international developments in reservoir planning and operation design and construction monitoring and maintenance In the light of the recent climatic changes which have seen a reduction in rainfall and resulted in water shortages a number of pertinent subjects are examined in detail for example the provision of new resources evaluation of optimal operating policies review of water supply options sedimentation effects the environmental aspects and the economic viability of reservoirs

Groundwater Models for Resources Analysis and Management Aly I. El-Kadi, 2017-11-22 Written by renowned experts in the field this book assesses the status of groundwater models and defines models and modeling needs in the 21st century It reviews the state of the art in model development and application in regional groundwater management unsaturated flow multiphase flow and transport island modeling biological and virus transport and fracture flow Both deterministic and stochastic aspects of unsaturated flow and transport are covered The book also introduces a unique assessment of models as analysis and management tools for groundwater resources Topics covered include model vs data uncertainty accuracy of the dispersion convection equation protocols for model testing and validation post audit studies and applying models to karst aquifers
