Profitability Evaluation of Major Technical Analysis Trading Strategies Applied to the S&P 500 from 2005 to 2023 David Neufang, 2024-09-03 Bachelor Thesis from the year 2024 in the

subject Business economics Investment and Finance grade 1 0 Reutlingen University language English abstract This thesis will examine how the efficient market hypothesis Fama 1965 the random walk hypothesis and the Martingale model relate to the profitability of technical analysis Additionally relevant research on profitability up to 2023 will be presented and summarized highlighting major findings in the context of profitability following technical trading rules The contribution to current research is made by testing the profitability of popular technical analysis strategies and discussing the underlying reasons for any observed profitability Furthermore a separate analysis will be conducted applying four technical analysis strategies to the S P 500 time series from 2005 to 2023 This thesis shows that none of the in selected literature deemed profitable trading strategies applied by Marshall 2017 Kuang et al 2014 and Brock et al 1992 are outperforming a S P 500 buy and hold strategy between 2005 and 2023 Robustness checks such as break even transaction cost analysis show that only two moving average variation strategies are profitable at the 20 basis points transaction cost level Neglecting this influence of transaction costs only one of these strategies returns are greater than those of a buy and hold strategy though still of insignificant nature Nevertheless technical analysis strategies exhibit superior performance in terms of Sharpe ratio compared to the buy and hold approach This is primarily due to this thesis assumption of investing in risk free treasury bills when not allocated to the S P 500 index
