The Oxford Handbook of Law, Regulation and Technology Roger Brownsword, Eloise Scotford, Karen Yeung, 2017 The variety pace and power of technological innovations that have emerged in the 21st Century have been breathtaking These technological developments which include advances in networked information and communications biotechnology neurotechnology nanotechnology robotics and environmental engineering technology have raised a number of vital and complex questions Although these technologies have the potential to generate positive transformation and help address grand societal challenges the novelty associated with technological innovation has also been accompanied by anxieties about their risks and destabilizing effects Is there a potential harm to human health or

the environment What are the ethical implications Do this innovations erode of antagonize values such as human dignity privacy democracy or other norms underpinning existing bodies of law and regulation These technological developments have therefore spawned a nascent but growing body of law and technology scholarship broadly concerned with exploring the legal social and ethical dimensions of technological innovation This handbook collates the many and varied strands of this scholarship focusing broadly across a range of new and emerging technology and a vast array of social and policy sectors through which leading scholars in the field interrogate the interfaces between law emerging technology and regulation Structured in five parts the handbook I establishes the collection of essays within existing scholarship concerned with law and technology as well as regulatory governance II explores the relationship between technology development by focusing on core concepts and values which technological developments implicate III studies the challenges for law in responding to the emergence of new technologies examining how legal norms doctrine and institutions have been shaped challenged and destabilized by technology and even how technologies have been shaped by legal regimes IV provides a critical exploration of the implications of technological innovation examining the ways in which technological innovation has generated challenges for regulators in the governance of technological development and the implications of employing new technologies as an instrument of regulatory governance V explores various interfaces between law regulatory governance and new technologies across a range of key social domains

Persons, Parts and Property Imogen Goold, Kate Greasley, Jonathan Herring, Loane Skene, 2014-09-25 The debate over whether human bodies and their parts should be governed by the laws of property has accelerated with the pace of technological change Having long held that a corpse could not be property the common law first recognised that there could be a property interest in human tissue in some circumstances in the early 1900s but it was not until a string of judicial decisions and statutory regulation in the 1990s and early 2000s that the place of this exception was cemented The 2009 decision of the Court of Appeal of England and Wales in *Yearworth Ors v North Bristol NHS Trust* added a new dimension to the debate by supporting a move towards a broader more principled basis for finding or rejecting property rights in human tissue However the law relating to property rights in human bodies and their parts remains highly contested The contributions in this volume represent a collation of the broad spectrum of analyses on offer and provide a detailed exploration of the salient legal and theoretical puzzles arising out of the body as property question

Me Medicine vs. We Medicine Donna Dickenson, 2013-06-18 Personalized healthcare or what the award winning author Donna Dickenson calls Me Medicine is radically transforming our longstanding one size fits all model Technologies such as direct to consumer genetic testing pharmacogenetically developed therapies in cancer care private umbilical cord blood banking and neurocognitive enhancement claim to cater to an individual s specific biological character and in some cases these technologies have shown powerful potential Yet in others they have produced negligible or even negative results Whatever is behind the rise of Me Medicine it isn t just science So why is Me Medicine rapidly edging out We Medicine and how has our commitment to our collective health suffered as a result In her cogent provocative analysis Dickenson examines the economic and political factors fueling the Me Medicine phenomenon and explores how over time this paradigm shift in how we approach our health might damage our individual and collective well being Historically the

measures of We Medicine such as vaccination and investment in public health infrastructure have radically extended our life spans and Dickenson argues we've lost sight of that truth in our enthusiasm for Me Medicine Dickenson explores how personalized medicine illustrates capitalism's protean capacity for creating new products and markets where none existed before and how this rather than scientific plausibility goes a long way toward explaining private umbilical cord blood banks and retail genetics Drawing on the latest findings from leading scientists social scientists and political analysts she critically examines four possible hypotheses driving our Me Medicine moment a growing sense of threat a wave of patient narcissism corporate interests driving new niche markets and the dominance of personal choice as a cultural value She concludes with insights from political theory that emphasize a conception of the commons and the steps we can take to restore its value to modern biotechnology

Property in the Body Donna Dickenson, 2017-06-22 Commodification of the human body is gaining ground strengthened by powerful interests This book helps us understand and regulate it

Lawyers' Medicine Imogen Goold, Catherine Kelly, 2009-09-16 This book investigates how the requirements limitations and intellectual structure of the British legal process have shaped medicine and medical practice The story of this inter relationship is greatly under researched which is particularly concerning given that the legal system remains a significant and pervasive influence on medicine and its practice to this day The question which unifies the series of historical studies presented here is whether legal consideration of medical practice and concepts has played a part in the construction of medical concepts and affected developments in medical practice in other words how the external legal gaze has shaped the way medicine itself conceptualises some of its practices and classifications The majority of the chapters consider this question in the context of the development and application of legislation but the influence of court processes is also considered Other themes which emerge from the book include the nature and exclusivity of medical expertise the impact of public opinion on the development of medical legislation and the difficulty the legal system has faced in dealing with new medical developments The chapters are arranged chronologically with an introduction drawing out themes that emerge from the chapters as a whole

Altruism Reconsidered Peter Sýkora, Urban Wiesing, 2016-04-01 As the use of human body parts has become increasingly commercialized a need has arisen for new approaches to regulation that moves beyond the paradigm of altruism During the course of this discussion the notion of property has become a key concept Focusing on practical and conceptual perspectives the multidisciplinary group of authors which includes specialists in philosophy law sociology biology and medicine have come together with practicing lawyers to consider both legal provisions and patterns of regulation in countries across Europe Identifying divergences between different legal traditions the authors explore various conceptual models which could be used to improve and to guide policy making With this twin focus on practical and conceptual perspectives this volume sets the standard for a detailed and innovative discussion of issues surrounding the regulation of research on human tissue
