Storing Carbon in Agricultural Soils Norman J. Rosenberg, Roberto C. Izaurralde, 2001-10-31 Soil carbon sequestration can play a strategic role in controlling the increase of CO₂ in the atmosphere and thereby help mitigate climatic change. There are scientific opportunities to increase the capacity of soils to store carbon and remove it from circulation for longer periods of time. The vast areas of degraded and desertified lands throughout the world offer great potential for the sequestration of very large quantities of carbon. If credits are to be bought and sold for carbon storage, quick and inexpensive instruments and methods will be needed to monitor and verify that carbon is actually being added and maintained in soils. Large scale soil carbon sequestration projects pose economic and social problems that need to be explored. This book focuses on scientific and implementation issues that need to be addressed in order to advance the discipline of carbon sequestration from theory to reality. The main issues discussed in the book are broad and cover aspects of basic science, monitoring and implementation. The opportunity to restore productivity of degraded lands through carbon sequestration is examined in detail. This book will be of special interest to professionals in agronomy, soil science and climatology. Storing Carbon in

Carbon Management Sunita Kumari Meena, Ademir de Oliveira Ferreira, Vijay Singh Meena, Amitava Rakshit, Rajendra P. Shrestha, Ch. Srinivasa Rao, Kadambot H.M. Siddique, 2023-04-19 *Agricultural Soil Sustainability and Carbon Management* presents long term research in the field of sustainable soil use and management to guide in the prioritizing the multifunctional value of soil health and addressing interdisciplinary links between major issues such as biodiversity and climate change. As soil is the largest terrestrial carbon pool and a significant contributor of greenhouse gases, much progress can be made toward curtailing the climate crisis by sustainable soil management practices. The book provides valuable insight into the soil and carbon management research gaps and the methodological challenges for research into soil carbon

management that will be important over the decades Prioritizes the multifunctional value of soil systems and addresses interdisciplinary links within major issues including Soil Health Carbon Sustainability Biodiversity and Climate change Provides best management practices and techniques for sustainable carbon management under different cropping pattern ecosystem Explains the carbon mechanism and application methodology in relation to food production and identifies future areas for research and developments Sustainable Plant Nutrition and Soil Carbon Sequestration Sheikh Adil Edrisi, Pradeep Kumar Dubey, Ch. Srinivasa Rao, Himlal Baral, Rajiv Kumar Chaturvedi, Purushothaman Chirakkuzhyil Abhilash, 2024-11-11 Terrestrial plant systems are an integral part of Earth's land resources Resources are mutually connected via the nutrient exchange phenomena Thus plant nutrition is crucial in managing soil fertility and land productivity Soil organic carbon is one of the critical indicators for assessing the viability of land and hence soil carbon sequestration which is a burgeoning issue regarding changing climatic conditions In this context this book provides an essential linkage between sustainable plant nutrition and soil carbon sequestration and their management strategies that lead to multidimensional benefits for environmental sustainability The primary purpose of this book is to explore the nexus between carbon sequestration and plant growth its role in maintaining ecosystem services and modeling aspects of soil carbon and nutrient dynamics Moreover it aims to address the growing challenges of ecological perturbations unraveling the potential of degraded lands for food fuel and nutritional security and accounting for meeting various UN SDGs **Climate Crisis: Adaptive Approaches and Sustainability** Uday Chatterjee, Rajib Shaw, Suresh Kumar, Anu David Raj, Sandipan Das, 2024-01-01 This book aims to contribute to the discourse on climate crisis by bringing together high quality empirical research on adaptive approaches and sustainability case studies from across the world The book is divided into six sections The introductory section has two chapters which sets the ground of the book as it discusses the framing of climate crisis and the different approaches towards it It also situates the book within the global discourse The first chapter seeks the traditional approaches to bridge the gap in the new climate science while the second chapter delivers the ultimate reasons for temperature change global warming and its consequences extreme weather events in a comprehensive way It is hoped that the book as a whole will provide a timely synthesis of a rapidly growing and important field of climate science but will also bring forward new and stimulating ideas that will shape a coherent and fruitful vision for future work for the community of Undergraduates Postgraduates Ph D Scholars and Researchers in the fields of environmental sciences humanistic and social sciences and geography In addition policy and decision makers environmentalists NGOs corporate sectors social scientists and government organizations will find this book to be of great value We believe that a diverse group of academics scientists geographers environmentalists environmental regulators social scientists and sustainable scientists with a common interest within the earth environmental sciences and humanistic and social sciences will find this book to be a comprehensive source for reference Also we strongly deemed that it will also provide some support for various levels of organizations and

Measuring and modelling soil carbon stocks and stock changes in livestock production systems - A scoping analysis for the LEAP work stream on soil carbon stock changes Food and Agriculture Organization of the United Nations, 2019-01-14 In order to build consensus on methods to measure and model soil carbon stocks and stock changes the Steering Committee of the Livestock Environmental Assessment and Performance LEAP Partnership mandated a task force to develop this scoping analysis and pave the way towards the formation of the LEAP Technical Advisory Group on soil carbon stock changes Soil carbon sequestration and storage in grasslands offers a significant potential to compensate for GHG emissions from livestock but the lack of consensus on the appropriate methodologies to account for soil carbon stock changes hinders robust and standardized assessments In this report we reviewed several published soil organic carbon SOC models and evaluated their aptitude to combine them with life cycle assessments LCAs Among contentious issues the most relevant are a the lack of universal models b the uneven data availability comparability and quality between countries and regions and c the difficulty to match measurable SOC fractions with those determined by the models Taking this into account a tiered approach is proposed according to the availability of original data to run the models The use of IPCC carbon C accounting system appears to be the simplest approach suitable to countries with scarcity of original C data Conversely more complex models such as Century Parton 1987 1988 or Roth C Smith 1998 are likely to perform better and give less uncertainty when original input data are easily available

Recent Advances in Carbon Capture and Storage Yongseung Yun, 2017-03-08 Carbon capture and storage CCS has been considered as a practical way in sequestering the huge anthropogenic CO₂ amount with a reasonable cost until a more pragmatic solution appears The CCS can work as a bridge before fulfilling the no CO₂ era of the future by applying to large scale CO₂ emitting facilities But CCS appears to lose some passion by the lack of progress in technical developments and in commercial success stories other than EOR This is the time to go back to basics starting from finding a solution in small steps The CCS technology desperately needs far newer ideas and breakthroughs that can overcome earlier attempts through improving modifying and switching the known principles This book tries to give some insight into developing an urgently needed technical breakthrough through the recent advances in CCS research in addition to the available small steps like soil carbon sequestration This book provides the fundamental and practical information for researchers and graduate students who want to review the current technical status and to bring in new ideas to the conventional CCS technologies

Climate Smart Agriculture Leslie Lipper, Nancy McCarthy, David Zilberman, Solomon Asfaw, Giacomo Branca, 2017-10-20 This book is open access under a CC BY NC SA 3.0 IGO license The book uses an economic lens to identify the main features of climate smart agriculture CSA its likely impact and the challenges associated with its implementation Drawing upon theory and concepts from agricultural development institutional and resource economics this book expands and formalizes the conceptual foundations of CSA Focusing on the adaptation resilience
