Bradley,2013-04-02 With stem cell research Dolly the cloned sheep in vitro fertilization age retardation and pharmaceutical mind enhancement humankind is now faced with decisions that it has never before had to consider The thoughtfulness or lack of it that we bring to those decisions will largely determine the future character of the living world Brutes or Angels will facilitate informed choice making about the personal use of biotechnologies and the formulation of public policies governing their development and use Ten biotechnologies that impact humans are considered stem cell research embryo selection human genomics gene therapies human reproductive cloning age retardation cognition enhancement the engineering of nonhuman organisms nanobiology and synthetic biology With deft and assured use of metaphors analogies diagrams and photographs James T Bradley introduces important biological principles and the basic procedures used in biotechnology Various ethical issues personhood personal identity privacy ethnic discrimination distributive justice authenticity and human nature and the significance of mortality in the human life cycle are presented in a

treatments that are dangerous or ineffective or by steering them toward treatments that are effective This report discusses the current environment in which patients are receiving unregulated stem cell offerings focusing on the treatments being offered and their risks and benefits The report considers the evidence base for clinical application of stem cell technologies and ways to assure the quality of stem cell offerings
