Richard W. Hemingway, Peter E. Laks, 2012-12-06 This book was developed from the proceedings of the 2nd North American Tannin Conference held in Houghton Michigan June 1991 The objective of this conference was to bring together people with a common interest in plant polyphenols and to promote interdisciplinary interactions that will lead to a better understanding of the importance of these substances Another objective of this conference was to extend the tannin family by making special efforts to encourage participation by scientists outside the United States obtain more coverage of the hydrolyzable tannins and further broaden the scope of coverage from the initial concentration on forestry and forest products Comparison of the contents of this book with Chemistry and Significance of Condensed Tannins that resulted from the proceedings of the 1st North American Tannin Conference shows the degree that these objectives were met In developing the second conference care was taken to assure that this book extends rather than duplicates the coverage of the first conference Therefore the two books should be taken together to obtain an up to date coverage of the broad area of chemistry and significance of plant polyphenols Our thanks go to the authors who so kindly contributed chapters and so patiently responded to our requests We thank the Conference Assistance Staff of Michigan Technological University for their help in planning and conducting the conference

Marine Natural Products V2 Poul Schever, 2012-12-02 Marine Natural Products Chemical and Biological Perspectives Volume II reviews the state of knowledge in the chemistry and biology of marine natural products It attempts to bring together timely and critical reviews that are representative of major current researches and that hopefully will also foreshadow future trends The first three chapters of this volume deal with marine carotenoids steroids and diterpenoids This is followed by a chapter that examines a single phylum the Coelenterata and its metabolites The Coelenterata is an almost exclusively marine phylum of some 9000 described living species Research predicts that the coelenterates will yield a rich harvest of organic metabolites The final chapter which focuses on ^{13}C NMR
