The Childbearing Decision Fertility Attitudes And Behavior:

The Childbearing Decision Greer Litton Fox, 1982-06 Original essays present new findings on when and why people choose to have children Recent changes in the age of new parents the number of children they choose to have and when they decide to stop having children are explored Issues of fertility in adolescence such as contraceptive use the support of the family and the decision to have sex are discussed How married people decide to have children the impact of marital discord and the effect of work are the subject of new research This well edited collection of eleven chapters by twenty contributors is a state of the art book reporting important and recent research on reproductive behavior The volume is recommended to researchers in population psychology especia

Reproductive Decision-Making in a Macro-Micro Perspective Dimiter Philipov, Aart C. Liefbroer, Jane E. Klobas, 2014-10-17 This book provides new insights into the significant gap that currently exists between desired and actual fertility in Europe It examines how people make decisions about having children and demonstrates how the macro level environment affects micro level decision making Written by an international team of leading demographers and psychologists the book presents the theoretical and methodological developments of a three year European Commission funded project named REPRO Reproductive Decision Making in a Macro Micro Perspective It also provides an overview of the research conducted by REPRO researchers both during and after the project The book examines fertility intentions from quantitative and qualitative perspectives demonstrates how the macro level environment affects micro level decision making and offers a multi level analysis of fertility related norms across Europe Overall this book offers insight into how people make decisions to have children when they are most likely to act on their decisions and how different social and policy settings affect their decisions and actions It will appeal to researchers graduate students and policy advisors with an interest in fertility demography and life course decision making

Families, Risk, and Competence Michael Lewis, Candice Feiring, 2014-04-04 The problems of studying families arise from the difficulty in studying systems where there are multiple elements interacting with each other and with the child How should this system be described Still other problems relate to indirect effects namely the influence of a particular dyad s interaction on the child when the child is not a member of the dyad While all agree that the mother father relationship has important bearing on the child s development exactly how to study this especially using observational techniques remains a problem While progress in studying the family has been slow there is no question that an increase in interest in the family systems as opposed to the mother child relationship is taking place This has resulted in an increase in research on families and their effects This volume by leading figures in child development on families attests to the growing sophistication of the conceptualization and measurement techniques for getting at family processes The third in a series that aims to address topics relevant to the developmental problems and developmental disabilities of retardation this volume is divided into two parts Section 1 presents basic family

processes and approaches for describing family dynamics It deals with these issues from a broad perspective including studying families at dinner families in different cultural contexts and the understanding of family in nonhuman primates Section 2 looks at family processes in the service of studying families at risk The risk factors include poverty malnutrition and developmental delay and retardation The study of family processes in these contexts provides data on family dynamics as well as how these dynamics impact on the children s developing competence This volume will be informative for researchers clinicians and educators from a variety of disciplines and settings The editors aim is to bring a greater clarity to issues concerning the family life of children and highlight new research and possibilities for intervention

Parents' Cultural Belief Systems Sara Harkness, Charles M. Super, 1996-01-01 This illuminating new volume offers a multifaceted view of parenting cultural belief systems their origins in culturally constructed parental experience their expressions in parental practices and their consequences for children s well being and growth Discussing issues with implications beyond the study of parenthood the book shows how the analysis of child outcomes which relate to parents cultural belief systems or parental ethnotheories can provide valuable insights into the nature and meaning of family and self in society and in some cases a basis for culturally sensitive therapeutic interventions Illuminating the powerful influence of parents cultural belief systems on the health and development of children this volume will be welcomed by a broad audience Anthropologists and psychologists interested in cultural theory and the interface of self and society will find a rich source of ideas and information Parent educators family therapists pediatricians and others who deal with ethnically diverse populations will discover invaluable information on what makes parents think and act the way they do The book can be used as a primary text for courses in cognitive anthropology and cultural psychology and as an auxiliary text for culturally oriented courses in lifespan development education health and human services

The Transition to Parenthood Gerald Y. Michaels, Wendy A. Goldberg, 1988-10-13 This 1988 book brings together leading scholars from a range of disciplines concerned with the study of the transition to parenthood The text discusses the reasons why some new parents experience an enhanced sense of self and a deepening of important relationships whereas others experience crisis and conflict

Thinking About the Family R. D. Ashmore, D. M. Brodzinsky, 2014-02-24 First published in 1986 Over the past decade and a half the rising divorce rate coupled with other changes in family life has led some observers to conclude that the traditional nuclear family today is analogous to a species of dinosaur facing an inevitable Ice Age and with it extinction During this recent period of social upheaval in which the American family has undergone considerable change there has been an exciting upswing in research on the family and the introduction of novel perspectives for seeking to understand this most important societal institution This volume brings together the writings of a set of researchers who represent one of these emerging approaches

Birth Control, Sex, and Marriage in Britain 1918-1960 Kate Fisher, 2006-07-13 The first half of the twentieth century witnessed a revolution in contraceptive behaviour as the large Victorian family disappeared This book offers a new perspective on the gender relations sexual attitudes and contraceptive practices that accompanied the emergence of the smaller family in modern Britain Kate Fisher draws on a range of first hand evidence including over 190 oral history interviews in which individuals born between 1900 and 1930 described their marriages and sexual relationships By using individual testimony she challenges many of the key conditions that have long been envisaged by demographic and historical scholars as necessary for any significant reduction in average family size to take place Dr Fisher demonstrates that a massive expansion in birth control took place in a society in which sexual ignorance was widespread that effective family limitation was achieved without the mass adoption of new contraceptive technologies that traditional methods such as withdrawal abstinence and abortion were often seen as preferable to modern appliances such as condoms and caps that communication between spouses was not key to the systematic adoption of contraception and above all that women were not necessarily the driving force behind the attempt to avoid pregnancy Women frequently avoided involvement in family planning decisions and practices whereas the vast majority of men in Britain from the interwar period onward viewed the regular use of birth control as a masculine duty and obligation By allowing this generation to speak for themselves Kate Fisher produces a richer understanding of the often startling social attitudes and complex conjugal dynamics that lay behind the vast changes in contraceptive behaviour and family size in the twentieth century National Library of Medicine Current Catalog National Library of Medicine (U.S.), 1983

Hard Choices Kathleen Gerson, 1986-03-17 How do women choose between work and family commitments And what are the causes limits and consequences of the subtle revolution in women's choices over the 1960s and 1970s To answer these questions Kathleen Gerson analyzes the experiences of a carefully selected group of middle class and working class women who were young adults in the 1970s Their informative life histories reveal the emerging social forces in American society that have led today's women to face several difficult choices Social Work and Genetics Sylvia Schild, Rita Beck Black, 1984 A significant contribution to professional training Social Work and Genetics is a guide to social work practice with clients who have genetic problems Through their rich clinical experiences in genetic counseling the authors provide a valuable body of knowledge for other professionals who must help individuals and their families cope with the dilemmas occurring as a result of the presence of a possible or real genetic defect or disease Social work students practicing social workers and professionals from various other disciplines will glean an enormous amount of information on basic genetic principles and issues
