Huw Davies,2012-06-12 Covering all aspects of vaccine research and development in one volume this authoritative resource takes a comprehensive and systematic approach to the science of vaccinology focusing not only on basic science but also on the many stages required to commercialize and navigate the regulatory requirements for human application both in the United States and Europe Reviews in detail the process of designing a vaccine from the initial stages of antigen discovery to human application Includes evaluation of vaccine efficacy and safety Details clinical trial design including regulatory requirements Discusses the emerging field of active cellular immunotherapy Vaccinology Principles and Practice provides an invaluable resource for clinicians scientific and medical researchers lecturers and postdoctoral fellows working in the field of vaccines

The Skin in Systemic Autoimmune Diseases Piercarlo Sarzi-Puttini,2006-01-26 This book represents the state of the art in the field of skin and autoimmune rheumatic diseases It covers systematically a growing and multifaceted topic which is of great importance in the clinical practice It also serves as a sharp educational tool as each chapter provides summaries and specific highlights to key references cited into the text The pathophysiological link between skin involvement and autoimmunity has been explained in

detail as well as diagnostic and therapeutic aspects This book yields an impressive body of well ordered information which summarizes the experience of a selected panel of distinguished physicians and scientists actively involved in the field of skin immunology and systemic autoimmunity Written by a respected panel of distinguished physician scientists actively involved in the field of skin immunology and systemic autoimmunity Box summaries at the end of each chapter highlight important topics Up to date basic knowledge as well as modern approach to diagnosis and therapy

Skin Cancer after Organ Transplantation Eggert Stockfleth, Claas Ulrich, 2009-05-05 Organ transplantation has been performed for almost 40 years with steadily increasing success regarding long time survival of the graft as well as quality of life for the patient However graft tolerance only can be achieved via induction and maintenance of an impaired immunological surveillance An increase of skin cancers as a consequence of the lowered cellular immunoresponse seems to parallel the overall increased long time survival rate of organ transplant recipients Against the background of chronic immunosuppression known risk factors like the amount of sun exposure prior and post transplantation oncogenic viruses as well as the genetic background and place of residence latitude are strongly related with the increased skin cancer incidence The increasing incidence of non melanoma skin cancer paralleling a prolonged survival of patients after organ transplantation represents a significant reason for morbidity and long term morbidity in organ transplant recipients worldwide The incidence of non melanoma skin cancer in liver kidney and heart transplant recipients varies from 1.5 to 22 % 2 to 24 % and 6 to 34 % after 5 years post transplant Ultraviolet radiation as well as immunosuppressive therapy are crucial risk factors regarding the induction and progression of skin cancer Ultraviolet radiation is related to the induction of DNA damage as well as interference with Langerhans cell antigen presentation and a Th1 Th2 shift induced via a release of IL 10 Whereas the overall duration of immunosuppression and the cumulative dosage applied are relevant parameters in the evaluation of an increased tumor risk individual differences between specific immunosuppressive agents remain unclear The workup of genetic as well as other unclear phenomenon like the reverse BCC SCC ratio might shed some further light into the genesis and immunology of the non melanoma skin cancer in general
