Small Scale Steelmaking:

Small-Scale Steelmaking R. D. Walker, 2012-12-06 The contents of this volume cover all the major activities associated with small scale steelmaking in mini steelworks except Direct Reduction on which two comprehensive volumes have recently appeared see refs 11 a survey of raw materials supply being followed by independent analyses of arc furnace practice casting and rolling The volume is rounded off by a consideration of the important topics of energy costs and environmental factors As anyone associated with iron and steelmaking well knows the industry is not the exclusive preserve of the metallurgist although he plays a prominent role in its activities For this reason it is hoped that the level of treatment will commend the book to a wide readership that includes non metallurgical professionals in plant management and elsewhere as well as industrial metallurgists Lecturers in universities polytechnics and colleges of further education should find this volume useful as a course reader for final year and postgraduate studies of steelmaking **The Burgeoning LDC Steel Industry**, 1979

furnaces including modelling and process control are discussed along with an introduction to the alternative methods of ironmaking In the area of steelmaking BOF plant practice including pre treatment of hot metal metallurgical features of oxygen steelmaking processes and their control form part of the book It also covers basic open hearth electric arc furnace and stainless steelmaking before discussing the area of casting of liquid steel ingot casting continuous casting and near net shape casting The book concludes with a chapter on the status of the ironmaking and steelmaking in India In line with the application of theoretical principles several worked out examples dealing with fundamental principles as applied to actual plant situations are presented The book is primarily intended for undergraduate and postgraduate students of metallurgical engineering It would also be immensely useful to researchers in the area of iron and steel
