The Toothpick Henry Petroski, 2008-11-04 A celebration culture and technology as seen through the history of the humble yet ubiquitous toothpick from the best-selling author of *The Pencil* From ancient Rome where emperor Nero made his entrance

into a banquet hall with a silver toothpick in his mouth to nineteenth century Boston where Charles Forster the father of the American wooden toothpick industry ensured toothpicks appeared in every restaurant the toothpick has been an omnipresent yet often overlooked part of our daily lives Here with an engineer s eye for detail and a poet s flair for language Henry Petroski takes us on an incredible tour of this most interesting invention Along the way he peers inside today s surprisingly secretive toothpick manufacturing industry and explores a treasure trove of the toothpick s unintended uses and perils from sandwiches to martinis and beyond The Essential Engineer Henry Petroski,2011-03-08 From the acclaimed author of *The Pencil* and *To Engineer Is Human* *The Essential Engineer* is an eye opening exploration of the ways in which science and engineering must work together to address our world s most pressing issues from dealing with climate change and the prevention of natural disasters to the development of efficient automobiles and the search for renewable energy sources While the scientist may identify problems it falls to the engineer to solve them It is the inherent practicality of engineering which takes into account structural economic environmental and other factors that science often does not consider that makes engineering vital to answering our most urgent concerns Henry Petroski takes us inside the research development and debates surrounding the most critical challenges of our time exploring the feasibility of biofuels the progress of battery operated cars and the question of nuclear power He gives us an in depth investigation of the various options for renewable energy among them solar wind tidal and ethanol explaining the benefits and risks of each Will windmills soon populate our landscape the way they did in previous centuries Will synthetic trees said to be more efficient at absorbing harmful carbon dioxide than real trees soon dot our prairies Will we construct a sunshade in outer space to protect ourselves from dangerous rays In many cases the technology already exists What s needed is not so much invention as engineering Just as the great achievements of centuries past the steamship the airplane the moon landing once seemed beyond reach the solutions to the twenty first century s problems await only a similar coordination of science and engineering Eloquently reasoned and written *The Essential Engineer* identifies and illuminates these problems and above all sets out a course for putting ideas into action
