Stochastic Phenomena And Chaotic Behaviour In Complex Systems Proceedings Of The Fourth Meeting Of:

Stochastic Phenomena and Chaotic Behaviour in Complex Systems Peter Schuster, 2012-12-06 This book contains all invited contributions of an interdisciplinary workshop of the UNESCO working group on systems analysis of the European and North American region entitled Stochastic Phenomena and Chaotic Behaviour in Complex Systems The meeting was held at Hotel Winterthalerhof in Flattnitz Karnten Austria from June 6 10 1983 This workshop brought together some 20 mathematicians physicists chemists biologists psychologists and economists from different European and American countries who share a common interest in the dynamics of complex systems and their analysis by mathematical techniques The workshop in Flattnitz continued a series of meetings of the UNESCO working group on systems analysis which started in 1977 in Bucharest and was continued in Cambridge U K 1981 and in Lyon 1982 The title of the meeting was chosen in order to focus on one of the current problems of the analysis of dynamical systems A deeper understanding of the various sources of stochasticity is of primary importance for the interpretation of experimental observations Chaotic dynamics plays a central role since it introduces a stochastic element into deterministic systems

Selforganization by

Nonlinear Irreversible Processes Werner Ebeling,Heinz Ulbricht,2012-12-06 These Proceedings contain invited lectures

presented at the third International Conference on Irreversible Processes and Dissipative Structures in Kihlungborn

German Democratic Republic in March 1985 These conferences the first of which was held in Rostock in 1977 and the

second in Berlin in 1982 are devoted to the study of irreversible processes far from thermal equilibrium and to the

phenomena of selforganization The meeting in Kihlungborn brought together some 160 mathematicians physicists

chemists and biologists from 10 countries who are all interested in the interdisciplinary field of synergetics The main topics of the conference were basic concepts of selforganization and evolution such as entropy instabilities nucleation dissipative

structures chaos and turbulence The contributions cover methods from thermodynamics the theory of dynamic systems stochastic and statistic theory the method of Green's functions the fluctuation dissipation theorem etc Several problems are studied in more detail e.g. the kinetics of nucleation especially in finite systems the dynamics of interfaces reaction diffusion systems chemical and biochemical pattern formation and information processing Further several contributions are devoted to the development of the concepts of chaos and turbulence The editors hope that the contributions collected in this volume will provide some new information about the field of selforganization which is in full development now Analele științifice ale Universității "Al.
