## **Stop Motion Puppet Sculpting A Manual Of Foam Injection Build Up And Finishing Techniques:**

**Stop-Motion Puppet Sculpting** Tom Brierton, 2015-01-27 Stop motion puppet animation is one of the most unusual and demanding art forms in the world. It uses a variety of skills including design, sculpting, metal work, mold making, and casting, taxidermy, filmmaking, storytelling, and acting, and can be seen in the simplest commercial spots on television to more complex animated shorts and science fiction and fantasy feature films. This work explains research and design of puppets and details the fabrication of stop motion puppets around a metal armature skeleton using the build up and foam injection processes. The former technique uses pre-cut blocks of foam formed with a pair of scissors or other instrument into the shape desired and attaching them to the armature. In the latter technique, the character is sculpted in clay over the armature. This clay sculpture is then replaced with foam by using a plaster mold and injection gun techniques. Finishing techniques described include the making of hair, eyes, eyelids, teeth, horns, nails, and chitinous insect shell-like surfaces. The manual also covers the process of creating replacement heads using rubber molds such as RTV and urethane castings. A glossary and bibliography complete the extensively illustrated work.

*Stop-Motion Filming and Performance* Tom Brierton, 2015-01-27 Stop motion animation has long been perceived as a technical practice rather than a creative, demanding art. Though stop motion requires considerable technical knowledge, it also involves aesthetics and artistry that go beyond the technician's realm. Just as important as puppet mechanics are lighting, filters, lenses, camera angle and placement, and dramatic pose and movement. This manual is a complete guide to the aesthetics of stop motion animation. Information is organized in an intuitive, easy-to-use structure following the order an animator uses in setting up and then executing a scene. The first half concentrates on the aesthetics of lighting and cameras, a primary concern in any shot, with details of camera placement, various lenses, and myriad lighting techniques. The second half deals with the process of performance art, an oft-overlooked aspect of stop motion animation. Included is a commentary on body language, facial expression, gesture, movement, and emotion, key concepts that are exemplified through the acting process. The work also offers an introduction to narrative form and a glossary of related terms.

**Dinosaur Sculpting** Allen A. Debus, Bob Morales, Diane E. Debus, 2013-08-28 This new book greatly expanded from the 1995 first edition describes detailed step-by-step procedures for sculpting, molding, and painting original prehistoric animals. It emphasizes the use of relatively inexpensive materials including oven-hardening polymer clay and wire. Additional tips are offered on how to build distinctive dino dioramas and scenes involving one's own original sculptures that you will learn how to conceive and build. This book will appeal to a new generation who would like to break into the industry of paleosculpture. Techniques range from basic to advanced. The authors also discuss what it means to be a paleoartist.
