Urban Stormwater Management in the United States Committee on Reducing Stormwater Discharge Contributions to Water Pollution, National Research Council, 2009-02-17 The rapid conversion of land to urban and suburban areas has profoundly altered how water flows during and following storm events putting higher volumes of water and more pollutants into the nation's rivers lakes and estuaries These changes have degraded water quality and habitat in virtually every urban stream system The Clean Water Act regulatory framework for addressing sewage and industrial wastes is not well suited to the more difficult problem of stormwater discharges This book calls for an entirely new permitting structure that would put authority and accountability for stormwater discharges at the municipal level A number of additional actions such as conserving natural areas reducing hard surface cover e.g. roads and parking lots and retrofitting urban areas with features that hold and treat stormwater are recommended Urban Stormwater Victorian Stormwater Committee, 1999-10-28 The intense concentration of human activity in urban areas leads to changes in both the quantity and quality of runoff that eventually reaches our streams lakes wetlands estuaries and coasts The increasing use of impervious surfaces designed to provide smooth and direct pathways for stormwater run off has led to greater runoff volumes and flow velocities in urban waterways Unmanaged these changes in the quantity and quality of stormwater can result in considerable damage to the environment Improved environmental performance is needed to ensure that the environmental values and beneficial uses of receiving waters are sustained or enhanced Urban Stormwater Best Practice Environmental Management Guidelines resulted from a collaboration between State government agencies local government and leading research institutions The guidelines have been designed to meet the needs of people involved in the planning design or management of urban land uses or stormwater drainage systems They provide guidance in ten key areas Environmental performance objectives Stormwater management planning Land use planning Water sensitive urban design Construction site management Business surveys Education and awareness Enforcement Structural treatment measures Flow management Engineers and planners within local government along with consultants to the development industry should find the guidelines especially useful Government agencies should also find them helpful in assessing the performance of stormwater managers While developed specifically for application in Victoria Australia the information will be of value to stormwater managers everywhere

Design and Construction of Urban Stormwater Management Systems American Society of Civil Engineers,1993-01-01 Prepared by the Task Committee of the Urban Water Resources Research Council of ASCE Copublished by ASCE and the Water Environment Federation Design and Construction of Urban Stormwater Management Systems presents a comprehensive examination of the issues involved in engineering urban stormwater systems This Manual which updates relevant portions of Design and Construction of Sanitary and Storm Sewers MOP 37 reflects the many changes taking place in the field such as the use of microcomputers and the need to control the quality of runoff as well as the quantity Chapters are prepared by authors with experience and expertise in the particular subject area The Manual aids the practicing engineer by presenting a brief summary of currently accepted procedures relating to the following areas financial services regulations surveys and investigations design concepts and master planning hydrology and water quality storm drainage hydraulics and computer modeling

Stormwater Management for Transportation Facilities Shaw L. Yu,1993 This synthesis will be of interest to highway design engineers maintenance engineers environmental personnel administrators and others responsible for the design operation and maintenance of stormwater management for highways and ancillary facilities Information is presented on the basic hydrology needed to assess stormwater impacts and on the effectiveness of stormwater management techniques Designers of highway facilities must consider stormwater management requirements within the context of both localized runoff impacts as well as downstream effects of runoff This report of the Transportation Research Board describes the management of both stormwater quantity and stormwater quality Stormwater quantity includes an overview of methods of estimating runoff and management control practices Stormwater quality management includes discussions of the most prevalent pollutants and best management practices BMP to minimize pollutants from transportation facilities Various types of structural and non structural methods are described including their design considerations and efficiencies Several stormwater management models are described with special concern for highway applications Highlights from the 1990 National Pollutant Discharge Elimination System NPDES permits are presented

Rethinking Stormwater Management through Sustainable Urban Design Ali Cheshmehzangi,Maycon Sedrez,Andrew Flynn,2024-08-31 This book provides a different narrative and approach to rethinking stormwater management through sustainable urban design It delves into design interventions and innovative strategies that lead to solving context specific issues of flooding water scarcity etc Starting with an overarching introduction and discussion on

stormwater management research the book then primarily focuses on sustainable urban design practices strategies and policy guidelines By summarising a selection of successful global case study examples the book highlights how we should rethink stormwater management practices and policies from the design perspective Through sustainable urban design suggestions the book covers a wide range of conceptual examples to design and policy guidelines as well as best practices that could be utilised for other contexts The book is divided into two sections of 1 architectural and urban design practices and interventions and 2 policies and action plans This collection helps researchers and scholars rethink stormwater management and consider innovative and more importantly sustainable design strategies that could help develop new paradigms and policies for water related issues in cities and communities This will interest multiple stakeholders mainly urban policymakers planners urban designers urban specialists landscape architects architects and urban ecologists It could be treated as a case study based guide for governmental units dealing with water related issues in cities and urban areas

Urban Stormwater and Flood Management Veeriah Jegatheesan,Ashantha Goonetilleke,John van Leeuwen,Jaya Kandasamy,Doug Warner,Baden Myers,Muhammed Bhuiyan,Kevin Spence,Geoffrey Parker,2019-04-02 This book brings together the experiences of engineers and scientists from Australia and the United Kingdom providing the current status on the management of stormwater and flooding in urban areas and suggesting ways forward It forms a basis for the development of a framework for the implementation of integrated and optimised storm water management strategies and aims to mitigate the adverse impacts of the expanding urban water footprint Among other topics it also features management styles of stormwater and flooding and describes biodiversity and ecosystem services in relation to the management of stormwater and the mitigation of floods Furthermore it places an emphasis on sustainable storm water management measures Population growth urbanisation and climate change will pose significant challenges to engineers scientists medical practitioners policy makers and practitioners of several other disciplines If we consider environmental and water engineers they will have to face challenges in designing smart and efficient water systems which are robust and resilient to overcome shrinking green spaces increased urban heat islands damages to natural waterways due to flooding caused by increased stormwater flow This work provides valuable information for practitioners and students at both senior undergraduate and postgraduate levels

Control of Urban Stormwater Runoff by Detention and Retention Richard H. McCuen,S. G. Walesh,Walter J. Rawls,1983 Urban Stormwater Management Seminars ,1976 *Urban Stormwater Modeling and Simulation* Stephan J. Nix,1994-07-13 Urban Stormwater Modeling and Simulation discusses several popular stormwater models and explains a variety of uses in practical terms This unique book is divided into five key sections and begins with a description of urban runoff problems and how computer models play an important role in problem solving The book continues with detailed discussions on the construction of watershed models model verification and validation the use of models for predicting stormwater runoff and pollution discharges and common problems associated with popular modeling

programs A practical approach is used throughout the book focusing on actual applications to illustrate basic principles This is the first book available that provides both new and experienced engineers consultants and scientists with an organized approach to stormwater modeling and simulation model construction model verification and software selection Water quality professionals environmental engineering students technical libraries regulators and planners will also find this a perfect hands on learning tool
