New Models of the Cell Nucleus: Crowding, Entropic Forces, Phase Separation, and Fractals Ronald Hancock, Kwang W. Jeon, 2013-12-27 *International Review of Cell and Molecular Biology* presents current advances and comprehensive reviews in cell biology both plant and animal. Articles address structure and control of gene expression, nucleocytoplasmic interactions, control of cell development and differentiation, and cell transformation and growth. Impact factor for 2012: 4.973. Ideas from the fields of biophysics, physical chemistry of polymer and colloid, and soft matter science have helped clarify the structure and functions of the cell nucleus. The development of powerful methods for modeling conformations and interactions of macromolecules has also contributed. The book aims to encourage cell and molecular biologists to become more familiar with and understand these new concepts and methods and the crucial contributions they are making to our perception of the nucleus. This is the first volume to present a comprehensive review of *New Models of the Cell Nucleus*.

**Early Papers** Edwin Grant Conklin, 1908      **Structure and Function of Eukaryotic Chromosomes** Wolfgang Hennig, 2013-06-29 This book presents an overview of various aspects of chromosome research written by leading experts of the respective fields, combining classic and recent molecular biological results. The variety and comprehensiveness make it a handbook of chromosome research for all scientists, teachers, and graduate students interested in this field. Dieses Buch faßt die unterschiedlichen Aspekte der Chromosomenforschung in Beiträgen von führenden Wissenschaftlern zusammen, wobei die klassischen Erkenntnisse mit neuesten Forschungsdaten zu einem umfassenden Überblick über das Gebiet kombiniert werden.

**Pathology of the Nucleus** James C.E. Underwood, 2012-12-06 New techniques make it possible for investigators to examine and sometimes quantify various aspects of nuclear morphology and function; now they can derive clinically and biologically useful information about the nucleus. This book draws together a series of techniques which have been successfully applied to the study of the nucleus of tumour cells. These are of fundamental importance to researchers in tumour histopathology and medical oncology. Detailed reviews are given of various aspects of the morphology, ploidy, and karyotypic status and function of the nuclei in the cells of tumours and preneoplastic lesions. Topics covered include nuclear morphology in tumour diagnosis, the ultrastructure of the nucleus, karyotypic analyses of solid tumours, flow cytometric assessment of nuclear ploidy and other parameters, histomorphometry of the nucleus, and in situ hybridisation.

*Nuclear Particles* Harris Busch, 2013-10-22 *The Cell Nucleus Volume IX: Nuclear Particles* Part B discusses splicing processing and the controls of transcriptional and transport events which must be essential to cells that are either growing or are phenotypically differentiated. The book describes the characteristics and structure of nuclear 30S RNP particles as well as the composition and general topology of RNA and protein in monomer 40S ribonucleoprotein particles. The text also demonstrates the two-dimensional gel electrophoresis of nuclear particles and immunocytochemistry of nuclear hnRNP.

complexes the enzymatic activities associated with hnRNP and the digestion products of nuclear ribonucleoprotein The nucleocytoplasmic transport of mRNA the nucleocytoplasmic transport of ribosomal subparticles and the rnp particles involved in release of in vitro synthesized poly a containing RNA in isolated nuclei are also considered The book further tackles nuclear bodies as functional indicators in the target cells of sex steroid hormone and the functional implications of nuclear glycoproteins and glycosaminoglycans Cell biologists geneticists pharmacologists molecular biologists biochemists and students taking related courses will find the book invaluable
