*Electoral Change* Mark Franklin, Thomas Mackie, Henry Valen, 2024-10-31 Until the last quarter of the 20th Century Western party systems appeared to be frozen and stability was generally taken to be the central characteristic of individual level party choice But during the 1970s and 1980s in a spasm of change that appeared to occur in all countries this ceased to be true Voters in Western countries suddenly demonstrated an unexpected and increasing unpredictability in their choices between parties often to the extent of voting for parties that are quite new to the political scene Understanding these fundamental changes became a pressing concern for political scientists and commentators alike and a matter of extensive controversy and debate In the middle 1980s an international team of leading scholars set out to explore the reasons for these shifts in voting patterns in sixteen western countries all those of the then European Community except for Luxembourg and

Portugal together with Australia Canada New Zealand Norway Sweden and the United States In this book they report their findings regarding the connections between social divisions and party choice and the manner in which these links had changed since the mid 1960s The authors based their country studies on a common research design By doing so they were able to focus on the characteristics that the sixteen countries had in common so as to evaluate the extent to which the changes had a common source This is a longitudinal study extending over nearly a generation of changes in voting behaviour that is as fully cross national as it was possible to produce at the time Its findings enabled the authors to break away from conventional explanations for electoral change to arrive at conclusions of far reaching importance The passage of time has not dated this book and in this edition the original text is augmented by a new Preface that describes the ways in which the book s findings retain their relevance for contemporary scholarship and by an Epilogue in which the main analyses reported in the book are brought up to date to the middle 2000s      *Rethinking Security in Post-Cold-War Europe* William Park,G.Wyn Rees,2014-06-11 Provides a survey of the principal items on the agenda following the end of the Cold War focusing upon the institutions and regions where the reconsideration of security issues has been particularly profound The book is organised into three main sections the first examines the changed roles of the main security institutions which have survived the Cold War NATO the European Union Western European Union and the Organisation for Security and Cooperation in Europe The second analyses the Central European countries Russia and States of the former Soviet Union in terms of their ideologies political structures and relationships of the Cold War period Lastly the text examines the northern and southern regions of Europe where quite different perspectives and agendas are concerned      **Monthly Labor Review** United States.
