Smoking Risk Perception And Policy:

Smoking Paul Slovic, 2001-05-23 This book presents a counter view based on a survey of several thousand young persons and adults probing attitudes beliefs feelings and perceptions of risk associated with smoking The authors agree that young smokers give little or no thought to health risks or the problems of addiction The survey data contradicts the model of informed rational choice and underscores the need for aggressive policies to counter tobacco firms marketing and promotional efforts and to restrict youth access to tobacco *The Smoking Puzzle* Frank A. Sloan, Vincent Kerry Smith, Donald H. Taylor, 2003 The authors find that smokers tend to be overly optimistic about longevity and future health if they quit later in life Smokers over 50 revise their perceptions only after a major health shock If smokers are informed of long term consequences and are told that quitting can come too late they are able to evaluate the risks more accurately

Valuing the Cost of Smoking Claude Jeanrenaud, Nils C. Soguel, 2012-12-06 CLAUDE JEANRENAUD NILS SOGUEL Smoking is a very common habit all over the world The prevalence rate ranges from 20% 40% in industrialised countries and is dramatically increasing in the developing world Smoking is risky and there is ample scientific evidence to support this statement We know that smoking is a major cause of disease and premature death in view of the fact that 3 million people die each year worldwide as a result of their smoking habit Twenty years ago the U S Surgeon General identified smoking as the single most important cause of morbidity and premature death USDHEW 1979 Tobacco consumption reduces life expectancy vastly Epidemiological research shows that people who have died from a smoking related disease would on average have lived for an additional 15 years had they not been smokers Warner 1987 The economic analysis of tobacco consumption is a complex and challenging issue which entails addressing many different questions What is the economic burden of smoking and do smokers pay their way How do individuals perceive their own health risks What is the effect of the addicting properties of nicotine on the behaviour of a rational utility maximizing individual Lastly what is the most effective way to discourage tobacco consumption In this context the assessment of the social burden of smoking using a cost of illness framework has played a central role since the beginning of the seventies **Public Opinion, Public Policy, and Smoking**

Thomas R. Marshall, 2016-07-25 Public Opinion Public Policy and Smoking tracks Americans changing attitudes about cigarette smoking over the last century With data from more than five thousand public and privately conducted polls this book carefully examines how Americans came to understand the health risks of smoking how the tobacco industry sought to reframe smoking and how public opinion support for tobacco control affected lawsuits elections and public policies This book tests several well known linkage models that connect public opinion with public policy It shows that conventional wisdom about public opinion and tobacco control policy is often mistaken This book offers the first in depth look at American public opinion and cigarette smoking during the last century **The Feeling of Risk** Paul Slovic, 2013-03-07 The Feeling of Risk brings together the work of Paul Slovic one of the world s leading analysts of risk to describe the extension of risk perception

research into the first decade of this new century In this collection of important works Paul Slovic explores the conception of risk as feelings and examines the interaction of feeling and cognition in the perception of risk He also examines the elements of knowledge cognitive skill and communication necessary for good decisions in the face of risk The first section of the book looks at the difficulty of understanding risk without an emotional component for example that disaster statistics lack emotion and thus fail to convey the true meaning of disasters and fail to motivate proper action to prevent them The book also highlights other important perspectives on risk arising from cultural worldviews and concerns about specific hazards pertaining to blood transfusion biotechnology prescription drugs smoking terrorism and nanotechnology Following on from The Perception of Risk 2000 this book presents some of the most significant research on risk perception in recent years providing essential lessons for all those involved in risk perception and communication

Smoking W. Kip Viscusi, 1992 Are the risks of smoking exaggerated Has there been an open and rational discussion about the risks of smoking This book attempts to answer these and many other questions about the subject providing a detailed empirical presentation on smoking behavior as a risky consumer decision Using new empirical data based on several national and regional surveys Viscusi addresses a number of important issues including the sources of information that people have about the risks of smoking the accuracy of their perceptions of the risks associated with smoking and the consistency of smoking decisions with other risky behavior scrutinizing issues such as whether smokers value risk differently than those who wear safety belts Viscusi also looks at the differences in age groups and how they assess these risks based on public information He provides new insight into the degree to which individuals understand smoking risks and take these risks into account in their behavior With its detailed empirical data and its examination of individual decision making processes this work will interest researchers in public health public policy psychology and economics as well as anyone concerned with this important issue

Smoking Paul Slovic, 2001-05-23 This important book reveals why the young start smoking and why as adults they regret having started It is a great contribution to helping end a national epidemic CHERYL HEALTON President CEO American Legacy Foundation This book is a must for everyone concerned about how to address the problem of tobacco use among young people Virtually all new smokers are children Many of them are in their early teens and one out of every three children who begin to smoke will die prematurely because of their use of tobacco This book includes the most objective thorough and authoritative research to date on the critical question about whether young people fully understand the consequences of their decision to smoke at the time they start and whether they are able to make rational decisions about this vitally important decision It leaves the reader with no doubt about the value of efforts to better educate our young people and to empower them to resist the lure of tobacco marketing MATTHEW MYERS President Campaign for Tobacco Free Kids Do individuals really know and understand the risks entailed by their smoking decisions The question is particularly important in the case of young persons because most smokers start during childhood and adolescence After years of intense publicity

about the damages of smoking it is generally believed that every teenager and adult in the U S knows that smoking is dangerous to health thus decisions to smoke are informed choices This book presents a counter view based on a survey of several thousand young persons and adults probing attitudes beliefs feelings and perceptions of risk associated with smoking The authors agree that young smokers give little or no thought to health risks or the problems of addiction The survey data contradicts the model of informed rational choice and underscores the need for aggressive policies to counter tobacco firms marketing and promotional efforts and to restrict youth access to tobacco *New Perspectives on Risk Communication* Asa Boholm,2013-12-16 That risk communication ranks high on the policymaking agenda is beyond discussion today The field is a point of intersection of social communication practical management and policy making It covers such diverse activities as to inform and educate the public about risk and risk management in order to influence attitudes and behaviour to act in situations of emergency or crises to aid in decision making and to assist in conflict resolution Communication has grown into a major concern in current risk governance based on network co ordinated management of public affairs conducted by authorities and companies and is recognized as a key component in the government of risk This is especially salient in policy fields relating to environmental planning and resource management urban planning chemical and food regulation or infrastructure planning development and maintenance This book explores risk communication research with a focus on new theoretical perspectives research findings and applied goals It reflects on a broad range of innovative theoretical perspectives methodological approaches and empirical areas This book was published as a special issue of the Journal of Risk Research Scientific Standards for Studies on Modified Risk Tobacco Products Institute of Medicine,Board on Population Health and Public Health Practice,Committee on Scientific Standards for Studies on Modified Risk Tobacco Products,2012-04-19 Smoking related diseases kill more Americans than alcohol illegal drugs murder and suicide combined The passage of the Family Smoking Prevention and Tobacco Control Act of 2009 gave the FDA authority to regulate modified risk tobacco products MRTPs tobacco products that are either designed or advertised to reduce harm or the risk of tobacco related disease MRTPs must submit to the FDA scientific evidence to demonstrate the product has the potential to reduce tobacco related harms as compared to conventional tobacco products The IOM identifies minimum standards for scientific studies that an applicant would need to complete to obtain an order to market the product from the FDA **The Ethics of Public Health Paternalism** T M Wilkinson,2024-12-30 This is an open access title available under the terms of a CC BY NC ND 4 0 International licence It is free to read on the Oxford Academic platform and offered as a free PDF download from OUP and selected open access locations The Ethics of Public Health Paternalism is about policies that try to stop people damaging their own health From the point of view of public health advocates if people did not smoke or drank less alcohol or kept off junk food and sugary liquids they would tend to be healthier Hence such tactics as taxing tobacco restricting the sale of alcohol and limiting the density of fast food outlets Because these tactics appear to limit freedom of choice they are often

pejoratively described as the actions of a nanny state that overvalues health and wrongly infringes on the autonomy of adults But many of us want to be healthy rather than ill and alive rather than dead Does a state really nanny us when it uses its power to make us healthier If it does should it stop Some public health policies might reduce inequities of health or save costs in medical treatment or correct market failures But as this book shows lots would not The best case for many public health interventions is paternalistic aiming to steer people away from making unhealthy choices against their own interests But even though it is the best case it often fails It overvalues health and undervalues autonomy It exaggerates the influence of addiction and the marketing of unhealthy products Except for smoking we do not have the evidence needed to show that unhealthy choices are so mistaken as to justify the interventions Much of what modern public health does when it tries to stop adults damaging their health has not been justified The Ethics of Public Health Paternalism applies political and moral philosophy to the ideas of both supporters and critics of public health interventions It uses philosophical analysis of the values of health and well being to explain what sort of evidence is needed to support public health interventions thus exposing a major gap in the arguments of public health advocates and it engages in detail with empirical evidence for instance about smokers regrets *The Psychology of Risk* Glynis M. Breakwell, 2014-09-15 Since the first edition of *The Psychology of Risk* there have been enormous macro economic and socio political changes globally the chaos in the world banking system and the financial crisis and recessions that it presaged the Arab Spring and the revolutionary shifts in power in the Middle East with rippled consequences around the world the development of ever more sophisticated cyber terrorism that can strike the private individual or the nation state with equal ease Amidst these changes in the face of hazard do the psychological models built to explain human reactions to risk still apply Has the research over the last few years resulted in an improvement in our understanding of how people perceive and act in relation to risk In this second edition Professor Dame Breakwell uses illustrations and current examples to address these questions and provide a totally up to the minute review of what is known about the psychology of risk **Regulating Lifestyle Risks** Alberto Alemanno, Amandine Garde, 2015-01-01 This collection of essays looks at the role the European Union could and should play in promoting healthier lifestyle in light of the moral philosophical legal and political challenges associated with the regulation of individual choices By tackling the main non communicable diseases NCD risk factors tobacco consumption harmful use of alcohol unhealthy diets and lack of physical activity the contributors endeavour to identify common themes and determine whether and if so to what extent the lessons learned in relation to each area of EU intervention could be transposed to the others By focusing on the European Union legal order the book highlights both the opportunities that legal instruments offer for NCD prevention and control agenda in Europe as well as the constraints that the law imposes on policy makers Consumer Perception of Product Risks and Benefits Gerard Emilien, Rolf Weitkunat, Frank Lüdicke, 2017-03-14 This book reflects the current thinking and research on how consumers perception of product risks and benefits affects their behavior It provides the scientific
