Social Behavior in Context Adrian Furnham, 1985 **What Determines Social Behavior? Investigating the Role of Emotions, Self-Centered Motives, and Social Norms** Corrado Corradi-Dell'Acqua, Leonie Koban, Susanne Leiberg, Patrik Vuilleumier, Ernst Fehr, 2016-09-28

Human behavior and decision making is subject to social and motivational influences such as emotions norms and self other regarding preferences The identification of the neural and psychological mechanisms underlying these factors is a central issue in psychology behavioral economics and social neuroscience with important clinical social and even political implications However despite a continuously growing interest from the scientific community the processes underlying these factors as well as their ontogenetic and phylogenetic development have so far remained elusive In this Research Topic we collect articles that provide challenging insights and stimulate a fruitful controversy on the question of what determines social behavior Indeed over the last decades research has shown that introducing a social context to otherwise abstract tasks has diverse effects on social behavior On the one hand it may induce individuals to act irrationally for instance to refuse money but on the other hand it improves individuals reasoning in that formerly difficult abstract problems can be easily solved These lines of research led to distinct although not necessarily mutually exclusive models for socially driven behavioral changes For instance a popular theoretical framework interprets human behavior as a result of a conflict between cognition and emotion with the cognitive system promoting self interested choices and the emotional system triggered by the social context operating against them Other theories favor social norms and deontic heuristics in biasing human reasoning and encouraging choices that are sometimes in conflict with one s interest Few studies attempted to disentangle between these as well as other models As a consequence although insightful results arise from specific domains tasks a comprehensive theoretical framework is still missing Furthermore studies employing neuroimaging techniques have begun to shed some light on the neural substrates involved in social behavior implicating consistently although not exclusively portions of the limbic system the insular and the prefrontal cortex In this context a challenge for present research lies not only in further mapping the brain structures implicated in social behavior or in describing in detail the functional interaction between these structures but in showing how the implicated networks relate to different theoretical models This is Research Topic hosted by members of the Swiss National Center of Competence in Research Affective Sciences Emotions in Individual Behaviour and Social Processes We collected contributions from the international community which extended the current knowledge about the psychological and neural structures underlying social behavior and decision making In particular we encouraged submissions from investigators arising from different domains psychology behavioral economics affective sciences etc implementing different techniques behavior electrophysiology neuroimaging brain stimulations on different populations neurotypical adults children brain damaged or psychiatric patients etc Animal studies are also included as the data reported are of high comparative value Finally we also

welcomed submissions of meta analytical articles mini reviews and perspective papers which offer provocative and insightful interpretations of the recent literature in the field

Sex Differences in Social Behavior Alice H. Eagly, 2013-05-13 In presenting an innovative theory of sex differences in the social context this volume applies social role theory and meta analytic techniques to research in aggression social influence helping nonverbal and group behavior Eagly's findings show that gender stereotypic behavior results from different male and female role expectations and that the disparity between these gender stereotypes and actual sex differences is not as great as is often believed

Oxytocin's routes in social behavior: into the 21st century. "Precision Medicine" approach for Oxytocin Elaine Keebaugh, Elissar Andari, Lisa A. Parr, 2015-12-21 Our brain is endowed with an incredible capacity to be social to trust to cooperate to be altruistic to feel empathy and love Nevertheless the biological underpinnings of such behaviors remain partially hardwired Seminal research in rodents has provided important insights on the identification of specific genes in modulating social behaviors in particular the arginine vasopressin receptor and the oxytocin receptor genes These genes are involved in regulating a wide range of social behaviors mother infant interactions social recognition aggression and socio sexual behavior Remarkably we now know that these genes contribute to social behavior in a broad range of species from voles to humans Indeed advances in human non invasive neuroimaging techniques and genetics have enabled scientists to begin to elucidate the neurobiological basis of the complexity of human social behaviors using pharmacological fMRI and imaging genetics Over the past few years there has been a strong interest focused on the role of oxytocin in modulating human social behaviors with translational relevance for understanding neuropsychiatric disorders such as autism schizophrenia and depression in which deficits in social perception and social recognition are key phenotypes The convergence of this interdisciplinary research is beginning to reveal the complex nature of oxytocin's actions For instance the way that oxytocin does influence social functioning is highly related to individual differences in social experiences but also to the inter individual variability in the receptor distribution of this molecule in the brain Remarkably despite the increasing evidence that oxytocin has a key role in regulating human social behavior we still lack of knowledge on the core mechanisms of action of this molecule Understanding its fundamental actions is a crucial need in order to target optimal therapeutic strategies for human social disorders The originality of this Research Topic stands on its translational focus on bridging the gap between fundamental knowledge acquired from oxytocin research in voles and monkeys and recent clinical investigations in humans For instance what are the key animal findings that can import further knowledge on the mechanisms of actions of this molecule in humans What are the key experiences that can be performed in the animal model in order to answer significant science gaps in the treatment of neuropsychiatric disorders Hence within this Research Topic we will review the current state of the field identify where the gaps in knowledge are and propose directions for future research This issue will begin with a comparative review that examines the role of this peptide in diverse animal models which highlights the adaptive value of oxytocin's function across multiple species Then a series of

reviews will examine the role of oxytocin in voles primates and humans with an eye toward revealing commonalities in the underlying brain circuits mediating oxytocin's effects on social behavior Next there will be a translational review highlighting the evidence for oxytocin's role in clinical applications in psychopathology Hence via the continuum of basic to translational research areas we will try to address the important gaps in our understanding of the neurobiological routes of social cognition and the mechanisms of action of the neuropeptides that guide our behaviors and decisions

Attitudes, Behavior, and Social Context Deborah J. Terry, Michael A. Hogg, 1999-11-01 The reasons why people do not always act in accord with their attitudes has been the focus of much social psychological research as have the factors that account for why people change their attitudes and are persuaded by such influences as the media There is strong support for the view that attitude behavior consistency and persuasion cannot be well understood without reference to the wider social context in which we live Although attitudes are held by individuals they are social products to the extent that they are influenced by social norms and the expectations of others This book brings together an international group of researchers discussing private and public selves and their interaction through attitudes and behavior The effects of the social context on attitude behavior relations and persuasion is the central theme of this book which in its combination of theoretical exposition critique and empirical research should be of interest to both basic and applied social psychologists

Carolina State Legislature is to conduct research aimed toward improving the understanding of developmental disabilities such as autism and to train the professionals who will be needed to work with this challenging population An important mechanism to help meet these goals is our annual conference on topics of special importance for the understanding and treatment of autism and related disorders As with the preceding books in this series entitled Current Issues in Autism this most recent volume is based on one of these conferences The books are not however simply published proceedings of conference papers Instead certain conference participants were asked to develop chapters around their presentations and other national and international experts whose work is beyond the scope of the conference but related to the conference theme were asked to contribute manuscripts as well These volumes are intended to provide the most current knowledge and professional practice available to us at this time

Television and Social Behavior Stephen B. Withey, Ronald P. Abeles, 2013-07-24 This book published originally in 1980 addressed the needs for a profile of televised violence which considered the advantages and disadvantages of various measures and for a furthering of research directions beyond the then popular emphasis on children The Committee on Television and Social Behavior was formed in 1972 and stimulated new research in order to provide a multidimensional profile of the social effects of television programming Chapters here look at the effect of television on adults as well as children particularly special audiences such as the elderly and minority groups An excellent summary of the various conceptual substantive and methodological issues around television's influence

Personality and Social Behavior Frederick Rhodewalt, 2012-01-04 The study of the relationship between the person and the situation has had a long history in psychology Many theories of personality are set on an interpersonal stage and many social phenomena are played out differently as the cast of characters change At times the study of persons and situations has been contentious however recent interest in process models of personality and social interaction have focused on the ways people navigate influence and are influenced by their social worlds Personality and Social Behavior contains a series of essays on topics where a transactional analysis of the person and situation has proved most fruitful Contributions span the personality and social psychology spectrum and include such topics as new units in personality neuroscience perspectives on interpersonal personality social and interpersonal frameworks for understanding the self and self esteem and personality process analyses of romantic relationships prejudice health and leadership This volume provides essential reading for researchers with an interest in this core topic in social psychology and may also be used as a text on related upper level courses

Exploring Family Relationships With Other Social Contexts Ross D. Parke, Sheppard G. Kellam, 2013-07-04 In the 1990s it is no longer news that families do not operate independently from other social organizations and institutions Instead it is generally recognized that families are embedded in a complex set of relationships with other institutions and contexts outside the family In spite of this recognition a great deal remains to be discovered about the ways in which families are influenced by these outside agencies or how families influence the functioning of children and adults in these extra familial settings school work day care or peer group contexts Moreover little is known about the nature of the processes that account for this mutual influence between families and other societal institutions and settings The goal of this volume is to present examples from a series of ongoing research programs that are beginning to provide some tentative answers to these questions The result of a summer workshop characterized by lively exchanges not only between speakers and the audience but among participants in small group discussions as well this volume attempts to communicate some of the dynamism and excitement that was evident at the conference In the final analysis this book should stimulate further theoretical and empirical advances in understanding how families relate to other contexts

Context and Development Robert Cohen, Alexander W. Siegel, 2014-02-04 The purpose of this book is to explore meaningful integrations of developmental processes and functioning with conceptualizations of context a term traditionally denoting physical settings social arenas or perceptual or social backdrops in relation to a focal point However the study of context has taken a considerably more unique and vibrant form in recent years the term is becoming more than a substitute for background independent variables Rather the contributions of context to behavior thought feelings and vice versa are becoming central issues in many research domains This text is a collection of

empirical and theoretical accounts for understanding context its focus is on integrating the study of context with the science of developmental psychology Although the authors work in many different areas of the field and with different populations they all converge on a central methodological conceptual theme of contextualism which is presented as the dynamic integration of intraindividual factors with environmental and social environmental factors **Practitioner's Guide to**
