Social Experimentation A Method For Planning And Evaluating Social Intervention:

Social Experimentation Henry W. Riecken, Robert F. Boruch, 2013-09-11 *Social Experimentation A Method for Planning and Evaluating Social Intervention* summarizes the available knowledge about how randomized experiments might be used in planning and evaluating ameliorative social programs. The book presents various aspects of social experimentation: design, measurement, execution, sponsorship, and utilization of results. Chapters are devoted to topics on experimentation as a method of program planning and evaluation, experimental design and analysis, institutional and political factors in social experimentation, and aspects of time and institutional capacity. Sociologists will find the book a valuable piece of reference.

Social Experiments Larry L. Orr, 1999. Intended to provide a basic understanding not only of how to design and implement social experiments but also of how to interpret their results once they are completed, author Larry L. Orr's *Social Experiments* is written in a friendly, how-to manner. Through the use of illustrative examples, how-to exhibits, and cases, and boldface key words, Orr provides readers with a grounding in the experimental method, including the rational and ethical issues of random assignment designs that best address alternative policy questions, maximizing the precision of the estimates, implementing the experiment in the field, data collection, estimating and interpreting program impacts, costs and benefits, dealing with potential biases, and the use and misuse of experimental results in the policy process. This book will be useful not only to those who plan to conduct experiments but also to the much larger group who will at one time or another want to understand the results of experimental evaluations.

Validity and Social Experimentation Leonard Bickman, 2000-01-21. Annotation: Leading social research methodologists and evaluators address the issues of validity, research design, and social experimentation in this first of two volumes inspired by the work of Donald Campbell and sponsored by the American Evaluation Association. The first part of the book focuses on three types of validity: external, construct, and statistical. Much attention is given to meta-analysis, statistical testing, and effect sizes. The second part is a major critique of Campbell's vision and practice of social experimentation. Contributors review and extend Campbell's ideas, concentrating on their relevance to evaluation and social intervention and seeking to define an experimenting society.

Evaluating Governmental Performance, 1975. DHHS Publication No. (OHDS). 1975. **Poverty Policy and Poverty Research** Robert H. Haveman, 1997-05-15.

The War on Poverty, instituted in 1965 during the administration of Lyndon B. Johnson, was one of the chief elements of that president's Great Society initiative. This book describes and assesses the major social science research effort that grew up with and in part because of these programs. Robert H. Haveman's objective is to illuminate the process by which social and political developments have an impact on the direction of progress in the social sciences. Haveman identifies the policy measures most closely tied to the War on Poverty and the Great Society and describes the nature of these policies and their growth from 1965 to 1980. He examines the extent and growth of resources devoted to the poverty-related research that accompanied these programs and assesses the impact of the growth in this research commitment over the 1965-1980 period.

Haveman's was the first full overview of recent poverty related research and an overview of methodological developments in the social sciences in the post 1965 period which were stimulated by the antipoverty effort

Evaluation and Experiment
 Carl A. Bennett, Arthur A. Lumsdaine, 2013-09-24 *Evaluation and Experiment* Some Critical Issues in Assessing Social Programs is a collection of papers presented at the 1973 symposium held at The Battelle Seattle Research Center This book contains eight chapters that consider some selected aspects of the problems in evaluating the outcomes of socially important programs such as those dealing with education health and economic policy The first chapter provides an overview of the issues around the Social Program Evaluation The next chapters deal with the successes and failures brought by social innovations the quasi experimental evaluation in compensatory education to estimate the true effects of such education programs and the usefulness and validity of econometric and related nonexperimental approaches for assessing the effects of social programs These topics are followed by surveys of a number of additional program evaluation studies particularly in the field of family planning or fertility control mostly carried out as experiments or quasi experiments in Asian and Latin American countries Other chapters describe the decision processes that involve explicit assessment of the worth or merit of outcomes and employ multivalued utility analysis and outline the ways in which evaluative data are useful in providing feedback to program or institutional operations and decisions The final chapter discusses resolutions for some of the disagreements expressed by others concerning the role of field experiments constraints in their utilization and other factors that enter into a comprehensive conception of program evaluation

Single Subject Research Thomas R Kratochwill, 2013-10-22 *Single Subject Research Strategies for Evaluating Change* presents an overview of strategies used to evaluate change in single subject research a particular approach referring to time series paradigms in which each subject is used repeatedly These strategies include research design graphical analysis and statistical tests and it will be apparent that such designs extend beyond those commonly employed in applied behavioral research The book opens with a brief historical perspective of time series and other small group research Separate chapters follow covering the analysis of graphic data as being of singular importance in single subject research the units of analysis issue and a nonparametric randomization approach to data analysis and the growing awareness among researchers that understanding the individual characteristics of interacting subjects may be inadequate for understanding the process that has taken place between them The final chapter reviews the advantages and disadvantages of the analytic methods presented in the previous chapters This volume will be of interest to those individuals actively engaged in educational and psychological experimentation for which single subject research strategies are or may prove to be valuable Students desiring to supplement their knowledge of a unique and rapidly emerging area of statistical analysis as applied to single subject research designs will also find this volume of importance
