Scientific Research in Education National Research Council, Division of Behavioral and Social Sciences and Education, Center for Education, Committee on Scientific Principles for Education Research, 2002-04-28 Researchers historians and philosophers of science have debated the nature of scientific research in education for more than 100 years Recent enthusiasm for evidence based policy and practice in education now codified in the federal law that authorizes the bulk of elementary and secondary education programs have brought a new sense of urgency to understanding the ways in which the basic tenets of science manifest in the study of teaching learning and schooling Scientific Research in Education describes the similarities and differences between scientific inquiry in education and scientific inquiry in other fields and disciplines and provides a number of examples to illustrate these ideas Its main argument is that all scientific endeavors share a common set of principles and that each field including education research develops a specialization that accounts for the particulars of what is being studied The book also provides suggestions for how the federal government can best support high quality scientific research in education

Toward a New Definition of Health P. I. Ahmed,2012-12-06 It is generally recognized today that the United States has a need to contribute to the improvement of health throughout the world The need stems from the interrelationships that exist between the health of Americans and the health status of the rest of the people on Spaceship Earth Disease does not respect national boundaries and the frequency of travel and trade between countries increases each year It further relates to the opportunities found in international settings to help solve health problems more effectively and efficiently This includes the unique human resources that are found throughout the world as well as certain natural ecological conditions that cannot be duplicated in the United States The United States also has a responsibility to contribute to improved health status Our tradition of humanitarianism alone supports such a responsibility but our comparative wealth of technical and financial resources dictates a requirement to participate Modern political realities define relationships between developed and developing countries that will not allow us to isolate ourselves from the compelling health needs of a majority of the world s population

Planning Theory Robert Burchell,2017-09-04 Theory and practice in city planning have never been known for their compatibility The planner dealing with stresses such as the personalities at work in a board meeting and coping with the realities of fund raising political realities and the like can find little guidance in the theory of the trade The issues of poverty groups whether rural or urban the provision of services and the packaging of them are seemingly insuperable The sheer frustration in the inability to deliver which so many planners feel can result in considerable impatience and a questioning of the relevance of theory The editors argue that this state of affairs though understandable is unacceptable While short range meliorism without sense of perspective may be good for the practitioner s individual psyche the cost may be borne by the long run best interests of the groups to be served The risks of a lack of perspective and the experiences generated by this phenomenon are too serious in their implications to permit the process to continue In this new age of anxiety it is essential for both planners and theorists to understand their roles as well as provide guidance in shaping them Burchell and Sternlieb have thus gathered here a variety of individuals all of whom in their separate and distinct fashions are seasoned both in practice and in theory The book is divided into five sections Physical Planning in Change Social Planning in Change Public Policy Planning in Change Economic Planning in Change and a final section detailing the roles of planners and who they are These shared puzzlements and insights will prove useful to all practitioners and theorists in the planning field
