Knorr-Cetina, 2013-10-22 The anthropological approach is the central focus of this study. Laboratories are looked upon with the innocent eye of the traveller in exotic lands and the societies found in these places are observed with the objective yet compassionate eye of the visitor from a quite other cultural milieu. There are many surprises that await us if we enter a laboratory in this frame of mind. This study is a realistic enterprise an attempt to truly represent the social order of life in laboratories and institutes of research just as they are. By bringing the philosophical issues to the surface as matters not of prejudgement but as matters of concern Karin Knorr Cetina has developed the first really positive challenge to the philosophy of science since the days of paradigms and internal definitions of meanings. Governing and Managing Knowledge in Asia Thomas Menkhoff, Hans-Dieter Evers, Yue Wah Chay, 2005 The spread of knowledge is a significant consequence of the process of globalization. Knowledge is used to tackle very diverse issues such as development challenges in emerging markets or the perplexity of corporate decision makers in the business world. The creation and proper governance of actionable knowledge and intellectual capital have become key preconditions for sustained societal and corporate competitiveness in an era of rapid globalization presenting new opportunities and challenges for policy makers, business leaders, managers and employees in both public and private sector organisations. This helpful book analyzes both the theoretical and practical aspects of effective knowledge governance and knowledge management in the context of an increasingly competitive globalized marketplace. Several case studies of Asian countries and organizations are presented aimed at analyzing factors impacting the governance of knowledge and exemplifying practices that policy makers and business leaders adopted to manage knowledge resources and knowledge processes to their fullest potential. *Scientific Knowledge* Barry Barnes, David Bloor, John Henry, 1996-07-15 Although science was once seen as the product of individual great men working in isolation we now realize that like any other creative activity science is a highly social enterprise influenced in subtle as well as obvious ways by the wider culture and values of its time. *Scientific Knowledge* is the first introduction to social studies of scientific knowledge. The authors all noted for their contributions to science studies have organized this book so that each chapter examines a key step in the process of doing science. Using case studies from cognitive science, physics and biology to illustrate their descriptions and applications of the social study of science they show how this approach provides a crucial perspective on how science is actually done. *Scientific Knowledge* will be of interest not only to those engaged in science studies but also to anyone interested in the practice of science. **Science and the**

Sociology of Knowledge (RLE Social Theory) Michael Mulkay, 2014-08-07 How far is scientific knowledge a product of social life In addressing this question the major contributors to the sociology of knowledge have agreed that the conclusions of science are dependent on social action only in a very special and limited sense In Science and the Sociology of Knowledge Michael Mulkay's first aim is to identify the philosophical assumptions which have led to this view of science as special and to present a systematic critique of the standard philosophical account of science showing that there are no valid epistemological grounds for excluding scientific knowledge from the scope of sociological analysis The rest of the book is devoted to developing a preliminary interpretation of the social creation of scientific knowledge The processes of knowledge creation are delineated through a close examination of recent case studies of scientific developments Dr Mulkay argues that knowledge is produced by means of negotiation the outcome of which depends on the participants use of social as well as technical resources The analysis also shows how cultural resources are taken over from the broader social milieu and incorporated into the body of certified knowledge and how in the political context of society at large scientists technical as well as social claims are conditioned and affected by their social position
