Sociology Joel M. Charon, 1986 *G.C.S.E. Sociology* Tony Lawson, 1988-09-01 Community College Sociology a Conceptual Approach William F. Keith, 1976 *Teaching Geography 11-18: A Conceptual Approach* Lambert, David, Morgan, John, 2010-01-01 This book provides a practical guide for students and practising teachers as to how concepts can form the basis of geography teaching This is particularly important at this time as the revised national curriculum for Geography which takes effect from September 2008 has greatly reduced the prescribed content to be covered and instead emphasises that geography is underpinned by a small number of key concepts that provide the building blocks for curriculum planning The new national curriculum for geography identifies 7 concepts Place Space Scale Interdependence Physical and human processes Environmental interaction and sustainable development and Cultural understanding and diversity and these areas are reflected in the book's table of contents This focus on concepts represents a significant shift in how geography is to be taught in schools yet there has been little extended discussion of what a concept led approach to teaching and learning would entail This book will provide geography teachers with a theoretically robust and practical approach to curriculum planning based on the concepts that underpin the subject **Publication of the American Sociological Society** American

Bernard S. Phillips, 2001 To look outside the discipline of sociology is to find little credibility given to the field as science Bernard Phillips argues that we are learning to see ever more clearly the contradiction between scientific standards and what in fact has been achieved by sociology Instead of knowledge based on the full range of our findings we have separate pieces of knowledge located within the diverse areas of the discipline and fads and fashions in the ideas and terms we use with relatively little cumulative development This has led many to question whether any scientific method can be applied to human behavior If the arguments and alternative interpretations in this book on the problematic nature of sociology's use of scientific method prove to be credible and fruitful then the implications are profound For example the conclusions drawn for every single social science study that has ever been conducted would be open to reinterpretation because they fail to take into account systematically the enormous complexity involved within any given instance of human behavior Our present

approach assumes implicitly that the pieces of the human jigsaw puzzle can at some point be put together so as to yield a coherent picture Yet as Phillips shows if each piece is itself deficient then no coherent picture emerges when we attempt to put the pieces together Refusing to take the current fragmentation of sociology as inevitable Phillips offers a clear vision through a series of heuristic web images of how sociologists might achieve the cumulative development and credibility that are the hallmarks of any science His research draws heavily on the works of classical and contemporary theorists philosophers and historians of science as well as on postmodernist critiques and responses to postmodernism This reconstruction will be useful for courses in method in the study of the classical tradition of sociology Bernard Phillips was introduced to sociology at Columbia University by C Wright Mills A former professor of sociology at Boston University cofounder of the ASA Section on Sociological Practice and founder of the Sociological Imagination Group his publications emphasize methodology and theory

Human Biosociology W.W. Spradlin,P.B. Porterfield,2012-12-06 There is growing evidence that an amalgamation of systems theories and communication and information theories will become the leading conceptual model for addressing human behavior In this book we have used a theoretical frame which focuses on the coding storage and movement of information within and among open systems We believe this to be a productive working concept which allows the student of human behavior to avoid the mind body dichotomy This conceptual framework also allows the integration of the biologic and sociologic aspects of human behavior Using this theoretical model we may see science and art as a continuum of imaginative ways of organizing information Hence the primary aim of this text is to provide a conceptual frame for students of human behavior which utilizes systems theories and information and communication theories in an integrated approach which is both theoretical and practical It is written for the student in the behavioral sciences who may be planning a career in medicine social work psychology nursing guidance and counseling the ministry or other health and service professions In addition students in biology sociology and philosophy may benefit from this conceptual approach It is also written for the practitioner who is currently delivering counseling and other health services to a variety of clientele
