Empirical Research towards a Relevance Assessment of Software

Clones Saman Bazrafshan, 2017-06-30 Redundancies in program source code software clones are a common phenomenon Although it is often claimed that software clones decrease the maintainability of software systems and need to be managed research in the last couple of years showed that not all clones can be considered harmful A sophisticated assessment of the relevance of software clones and a cost benefit analysis of clone management is needed to gain a better understanding of cloning and whether it is truly a harmful phenomenon This thesis introduces techniques to model analyze and evaluate versatile aspects of software clone evolution within the history of a system We present a mapping of non identical clones across multiple versions of a system that avoids possible ambiguities of previous approaches Though processing more data to determine the context of each clone to avoid an ambiguous mapping the approach is shown to be efficient and applicable to large systems for a retrospective analysis of software clone evolution The approach has been used in several studies to gain insights into the phenomenon of cloning in open source as well as industrial software systems Our results show that non identical clones require more attention regarding clone management compared to identical clones as they are the dominating clone type for the main share of our subject systems Using the evolution model to investigate costs and benefits of refactorings that remove clones we conclude that clone removals could not reduce maintenance costs for most systems under study

Semiconductor Devices in Harsh Conditions Kirsten Weide-Zaage, Malgorzata Chrzanowska-Jeske, 2016-11-25 This book introduces the reader to a number of challenges for the operation of electronic devices in various harsh environmental conditions While some chapters focus on measuring and understanding the effects of these environments on electronic components many also propose design solutions whether in choice of material innovative structures or strategies for amelioration and repair Many applications need electronics designed to operate in harsh environments Readers will find in this collection of topics tools and ideas useful in their own pursuits and of interest to their intellectual curiosity With a focus on radiation operating conditions sensor systems package and system design the book is divided into three parts The first part deals with sensing devices designed for operating in the presence of radiation commercials of the shelf COTS products for space computing and influences of single event upset The second covers system and package design for harsh operating conditions The third presents devices for biomedical applications under moisture and temperature loads in the frame of sensor systems and operating conditions

Recent Advances in Algorithmic Differentiation Shaun Forth, Paul Hovland, Eric Phipps, Jean Utke, Andrea Walther, 2012-07-30 The proceedings represent the state of knowledge in the area of algorithmic differentiation AD The 31 contributed papers presented at the AD2012 conference cover the application of AD to many areas in science and engineering as well as aspects of AD theory and its implementation in tools For all papers the referees selected from the program committee and the greater community as well as the editors have emphasized accessibility of the presented ideas also to non AD experts In the AD tools arena new implementations are introduced covering for example Java and graphical modeling environments or join the set of existing tools for Fortran New

developments in AD algorithms target the efficiency of matrix operation derivatives detection and exploitation of sparsity partial separability the treatment of nonsmooth functions and other high level mathematical aspects of the numerical computations to be differentiated Applications stem from the Earth sciences nuclear engineering fluid dynamics and chemistry to name just a few In many cases the applications in a given area of science or engineering share characteristics that require specific approaches to enable AD capabilities or provide an opportunity for efficiency gains in the derivative computation The description of these characteristics and of the techniques for successfully using AD should make the proceedings a valuable source of information for users of AD tools

Architecture Description Infrastructure for Multi-Platform Modeling Andreas Wortmann, 2016-11-08 Software engineering for complex systems requires abstraction multi domain expertise separation of concerns and reuse Domain experts rarely are software engineers and should formulate solutions using their domain s vocabulary instead of general purpose programming languages GPLs Successful integration of domain specific languages DSLs into a software system requires a separation of concerns between domain issues and integration issues while retaining a loose enough coupling to support DSL reuse in different contexts Component based software engineering CBSE increases reuse and separation of concerns by encapsulating functionalities in components Components are GPL artifacts which raises accidental complexities Model driven engineering MDE abstracts from GPLs by lifting models to primary development artifacts Models can be abstract and better comprehensible by using domain vocabulary instead of a GPL They can be platform independent and translated into GPLs for different target platforms Component connector C C architecture description languages ADLs combine CBSE and MDE to compose of architectures from component models We present concepts for engineering software systems with exchangeable component behavior languages The concepts are realized in a software architecture modeling infrastructure that comprises modeling languages to develop applications based on C C software architectures with exchangeable component behavior DSLs It supports transformations from platform independent to platform specific software architectures and compositional code generation With this it enables domain experts to re use the most appropriate component behavior DSL and facilitates composition of domain solutions through encapsulation in components

Recommendation Systems in Software Engineering Martin P. Robillard, Walid Maalej, Robert J. Walker, Thomas Zimmermann, 2014-04-30 With the growth of public and private data stores and the emergence of off the shelf data mining technology recommendation systems have emerged that specifically address the unique challenges of navigating and interpreting software engineering data This book collects structures and formalizes knowledge on recommendation systems in software engineering It adopts a pragmatic approach with an explicit focus on system design implementation and evaluation The book is divided into three parts Part I Techniques introduces basics for building recommenders in software engineering including techniques for collecting and processing software engineering data but also for presenting

recommendations to users as part of their workflow Part II Evaluation summarizes methods and experimental designs for evaluating recommendations in software engineering Part III Applications describes needs issues and solution concepts involved in entire recommendation systems for specific software engineering tasks focusing on the engineering insights required to make effective recommendations The book is complemented by the webpage rsse.org book which includes free supplemental materials for readers of this book and anyone interested in recommendation systems in software engineering including lecture slides data sets source code and an overview of people groups papers and tools with regard to recommendation systems in software engineering The book is particularly well suited for graduate students and researchers building new recommendation systems for software engineering applications or in other high tech fields It may also serve as the basis for graduate courses on recommendation systems applied data mining or software engineering Software engineering practitioners developing recommendation systems or similar applications with predictive functionality will also benefit from the broad spectrum of topics covered
