Conceptual metaphor and embodied cognition in science learning Tamer Amin,Fredrik Jeppsson,Jesper Haglund,2018-10-03 Scientific concepts are abstract human constructions invented to make sense of complex natural phenomena Scientists use specialised languages diagrams and mathematical representations of various kinds to convey these abstract constructions This book uses the perspectives of embodied cognition and conceptual metaphor to explore how learners make sense of these concepts That is it is assumed that human cognition including scientific cognition is grounded in the body and in the material and social contexts in which it is embedded Understanding abstract concepts is therefore grounded via metaphor in knowledge derived from sensory and motor experiences arising from interaction with the physical world The volume consists of nine chapters that examine a number of intertwined themes how systematic metaphorical mappings are implicit in scientific language diagrams mathematical representations and the gestures used by scientists how scientific modelling relies fundamentally on metaphor and can be seen as a form of narrative cognition how implicit metaphors can be the sources of learner misconceptions how conceptual change and the acquisition of scientific expertise involve learning to coordinate the use of multiple implicit metaphors and how effective instruction can build on recognising the embodied nature of scientific cognition and the role of metaphor in scientific thought and learning The volume also includes three extended commentaries from leading researchers in the fields of cognitive linguistics the learning sciences and science education in which they reflect on theoretical methodological and pedagogical issues raised in the book This book was originally published as a special issue of the International Journal of Science Education

Handbook of Fluoropolymer Science and Technology Dennis W. Smith,Scott T. Iacono,Suresh S. Iyer,2014-05-05 Handbook of Fluoropolymer Science and Technology A comprehensive handbook on fluoropolymer synthesis characterization and processing Fluoropolymers one of the more durable classes of polymer materials are known to enable novel technologies as a result of their remarkable properties As key components in industry applications fluoropolymers have established commercial interest and scientists have discovered more efficient approaches of handling them This book reviews up to date fluoropolymer platforms as well as recently discovered methods

for the preparation of fluorinated materials. It focuses on synthesis, characterization, and processing aspects, providing guidelines for practicing scientists and engineers. In addition, the book covers concepts and studies from leading international laboratories, including academia, government, and industrial institutions. Emerging technologies and applications in energy, optics, space exploration, fuel cells, microelectronics, gas separation, membranes, biomedical instrumentation, and more. Current environmental concerns associated with fluoropolymers, relevant regulations, and growth opportunities. Overall, the chapters provide coverage of chemical methods and help the reader further understand how fluoropolymer research provides solutions for material challenges. The concepts in this book also inspire professionals to identify new markets and funding sources for fluoropolymer research and development.

The Art of Teaching Primary School Science, Vaille Dawson, Grady Venville, 2020-07-16. Children have an innate curiosity about the natural world that makes teaching science a rewarding experience. However, teaching science is an art that requires a unique combination of knowledge and skills to make the most of students' interest and foster their understanding. With contributions from leading educators, *The Art of Teaching Primary Science* addresses the fundamental issues in teaching science in primary and early childhood years. Reflecting current research in science education, *The Art of Teaching Primary Science* covers the following areas: the theoretical underpinnings of science education and curriculum; effective science teaching practice; planning teaching strategies; investigations, resources, and assessment; key issues including scientific literacy; integrating science and technology; and activities outside the classroom.
