

# The Energy Sector and Energy Policy in the Soviet Economy

Before proceeding to our main subject—the examination of Soviet energy technology and its use in efforts to build up Soviet industry in general and the energy sector in particular—we must first examine the Soviet Union's energy resources and the major lines of energy policy in the postwar years. This chapter discusses the Soviet energy resources base, some distinctive features of the structure of the supply and demand for energy in the Soviet economy, and the establishment of the overall framework of energy policy. The final section summarizes the energy sector's importance in a socialist or planned economic structure.

## ENERGY RESOURCES

The nature of the Soviet energy resources base has important consequences for Soviet energy policy and for the direction of its efforts in energy R and D. The Soviet Union's energy resources are large enough that it can make the trade-off between use and effort much to its benefit. Even so, one of our main goals in this report is to be the only large industrial country in that position. But the economic characteristics of its energy resources are not especially attractive, and most of its internal energy choices and the direction of its energy R and D are conditioned by that drawback, quality, transportability, and other economic features of these energy resources. The best way to convey the situation is to describe briefly the major components of the energy resources base.

### Coal\*

Soviet authorities like us very much the USSR has more built the coal resources of the world. This is based on their estimates of 4,000 billion tons of "general-geological" reserves, divided by 300 million and 100 million as Soviet and western stock, but built coal and oil reserves still has 100 billion.

More important for economic development planning are the reserves kept by the All-Union Geological Fund of unexplored and uncommercially given

\*The following discussion is based mostly on statistics given.

\*The above is based on the USSR's, comparison of the Soviet reserve estimate. The definition of these categories is rather detailed, but the changes in the need to describe Soviet industry, with regard to public production structure.

Balzer,2019-06-04 It is my sincere hope that the reforms currently being introduced in the USSR will render much of this book obsolete Yet even if perestroika brings significant change to the Soviet Union historians will want a record of what existed before After four years it has become apparent that perestroika is a painful long term process In such a large and diverse country even the reforms that are successful cannot take place everywhere at once One major goal in publishing this book is to make data from a major interview project on Soviet science and technology available to a broader audience Despite the changes taking place many of the features illuminated by these unique data persist
