The Ethics of Social Research Joan E. Sieber, 2012-12-06 Social scientists are unprepared for many of the ethical problems that arise in their research and for criticisms of their ethics that seem to ignore such cherished scientific values as objectivity and freedom of inquiry Yet they possess method ological talent and insight into human nature that can be used to understand and resolve these problems The contributors to this book demonstrate that criticism of the ethics of social research can stimulate constructive development of meth odology Both volumes of *The Ethics of Social Research* were written for and by social scientists to show how ethical dilemmas arise in the day to day conduct of social research and how they can be resolved The topics discussed in the companion volume include ethical problems that arise in experiments and sample surveys this book deals with the ethical issues involved in fieldwork and in the regulation and publication of research With candor and humor many of the contributors describe lessons they have learned about themselves their methods and their research participants Collectively they illustrate that both humanists and determinists are likely to encounter ethical dilemmas in their research albeit different ones and that a blending of deterministic and humanistic approaches may be needed to solve these dilemmas The aim of this book is to assist investigators in preparing to meet some of the ethical problems that await the unwary It offers perspectives values and guidelines for anticipating problems and devising solutions

committees in Canada now function as an industry costing over thirty five million dollars annually The Seduction of Ethics argues that while ethics codes are alluring to the public they fuel moral panic and increase demands for institutional accountability Will C van den Hoonaard explores the research ethics review process itself by analysing the moral cosmology and practices of ethics committees regarding research and researchers The Seduction of Ethics also investigates how researchers have tailored their approaches in response to technical demands leading social science disciplines to resemble each other more closely and lose the richness of their research Van den Hoonaard reveals an idiosyncratic and inconsistent world in which researchers employ particular strategies of avoidance or partial or full compliance as they seek approval from ethics committees
