in TESOL can be used individually or in groups

The Strides of Vishnu Ariel Glucklich, 2008-05-09 Books about Hinduism often begin by noting the immense size and complexity of the subject Hinduism is vast and diverse they say Or it doesn't exist at all Hinduism is merely a convenient and foreign term that masks a plurality of traditions In either case readers are discouraged by the thought that they are getting only a tiny sample or a shallow overview of something huge and uniquely difficult This book is designed to be accessible and sophisticated holding the reader's interest in the dynamic sequence of ideas through time and place Each of the 12 chapters combines historical material with key religious scientific and philosophical ideas supported by substantial quotations from scriptures and other texts Historic places and persons are fleshed out as actors in a narrative about the relation of the sacred to ordinary existence as it is mediated through arts sciences rituals and philosophical ideas Although many books introduce the Hindu tradition this is the first with a broad historical and cultural focus that emphasizes archaeological as well as textual evidence

Science Studies Meets Colonialism Amit Prasad, 2022-10-06 The field of science and technology studies has long critiqued the idea that there is such a thing as a universal and singular Science that exists independently of human society interpretation and action However the multiple significant ways in which colonial legacies impact and shape this project have often remained out of sight at the edges of the discipline In this important book Amit Prasad seeks to rectify this erasure demonstrating that problematic idealized imaginaries of science scientists and the scientific realm can be traced back to the birth of modern science during European colonialism Such visions of science and technology have undergirded the imagination of the West and thus of its others constructing hierarchies of technological innovation and scientific value but also unexpectedly leaving society vulnerable to contemporary threats of misinformation and conspiracy theories as has been strikingly evident during the COVID 19 pandemic Far from being an indictment of STS this rigorous book seeks to highlight such concerns to make STS engage more carefully with issues of colonialism and thus to enable readers to understand the rapidly changing global topography of science and technology today and into the future

Science and the Decolonization of Social Theory Gennaro Ascione, 2016-08-12 This book addresses the ideological figure of modernity its presumed historical significance as an era and its theoretical adequacy as a frame It shows how science is evoked to prevent the sociological imagination from elaborating non Eurocentric categories and terminologies that are more adequate for a global age The idea of modernity should not only be contested but radically unthought in its foundational assumptions These assumptions inform concepts such as secularization emancipation the global and accumulation of capital This book frees these concepts from ethnocentrism and discloses a path toward a new non Eurocentric global social theory Gennaro Ascione explores the transformative potential of decolonizing knowledge through a radical reconsideration of the historical and epistemological role that the intellectual reference to science plays in the construction of concepts This ground breaking work challenges social theorists to think

globally beyond modernity bringing together social theory and science in an unprecedented way. Importantly it makes accessible a new space of missing theorization for further developments and inquiries in the field. **History of**

Technology Volume 29 Ian Inkster, 2016-09-30 The common question from the western point of view is of the sort why did China lose its early leadership of productive technologies to Europe during the early modern period. Answers to this seemingly clear enquiry vary from general cultural inwardness to the interferences of imperial governance. This collection surveys such theories but alters the issue by raising the notion that Chinese technologies did not so much fail as move along a path different from that of Europe. Our second collection on the Mindful Hand also shifts common ground by querying and modifying common views of the links between knowledge and technique in early modern European development. Scientific or related knowledge was not brought to technique as a socio cultural gift from an educated elite to the working man. Rather educated gents, practitioners, instrument makers, craftsfolk and technicians of all kinds intermingled both socially and in terms of the recognition of technical problems as well as in the assemblage of the mental, commercial and cognitive resources required to pursue innovative production projects.
