## **Small And Decentralized Wastewater Management Systems:**

*Small & Decentralized Wastewater Management Systems* Ronald W. Crites, George Tchobanoglous, 1998-04-02  
Decentralized Wastewater Management presents a comprehensive approach to the design of both conventional and innovative systems for the treatment and disposal of wastewater or the reuse of treated effluent. Smaller treatment plants which are the concern of most new engineers are the primary focus of this important book. **Small and Decentralized Wastewater Management Systems** Ronald W. Crites, George Tchobanoglous, 1998 This text presents a design of alternative collection systems both conventional and experimental for the treatment and disposal of the treated effluent. The book focuses particularly on smaller treatment plans and individual decentralized systems. Treatment Wetlands Robert H. Kadlec, Scott Wallace, 2008-07-22 Completely revised and updated Treatment Wetlands Second Edition is still the most comprehensive resource available for planning, designing and operating wetland treatment systems. It provides engineers and scientists with a complete reference source that includes detailed information on wetland ecology, design for consistent performance, site specific studies, estimated costs, construction guidance and operational control through effective monitoring. Case histories of operational wetland treatment systems illustrate the variety of design approaches presented, allowing readers to tailor them to the needs of their projects. **Natural Wastewater Treatment Systems, Second Edition** Ronald W. Crites, E. Joe Middlebrooks, Robert K. Bastian, 2014-03-14 Calling for ecologically and economically sound wastewater treatment systems, the authors of *Natural Wastewater Treatment Systems* explore the use of wetlands, sprinkler or deep irrigation, groundwater recharge and other natural systems as sustainable methods for the treatment and management of wastewater. Based on work by prominent experts in natural waste treatment, this text provides a thorough explanation on how soil and plants can successfully sustain microbial populations in the treatment of wastewater. Determining that natural systems cost less to construct and operate and require less energy than mechanical treatment alternatives, this book also explains how these processes produce lower amounts of residual solids and use little or no chemicals. What's New in the Second Edition This revised edition includes current design and regulatory and operational developments in the natural wastewater treatment field. It provides detailed examples and analyses along with significant operational data in each chapter. It also considers how processes provide passive treatment with a minimum of mechanical elements and describes new approaches to partially mixed ponds, including dual powered aeration ponds. Introduces the planning procedures and treatment mechanisms responsible for treatment in ponds, wetlands, land application and soil absorption systems. Provides new case studies of constructed wetlands and water reuse systems. Presents design criteria and methods of pond treatment and pond effluent upgrading. Describes constructed wetlands design procedures, process applications, treatment performance data and land treatment concepts and design equations. Includes information on constituents of emerging concern, CEC, and their fate in natural systems. The text discusses wastewater pond systems, free water surface, constructed wetlands, subsurface

and vertical flow constructed wetlands land treatment sludge management and onsite wastewater systems It describes residuals and biosolids management including nitrogen removal pretreatment methods and uses U S customary and metric units in all chapters It presents case studies of new applications of natural systems and includes worked examples of design equations for ponds and land treatment It also provides a biosolids regulatory update from a top EPA scientist and algae reduction technologies for ponds and wetlands Designed for practicing wastewater engineers and scientists involved in the planning design and operation of ponds wetlands land treatment biosolids and onsite soil based treatment systems the book integrates many natural treatment systems into one single source
