Social Dynamics Steven N. Durlauf, H. Peyton Young, 2001 This collection of essays presents a variety of approaches to understanding the dynamics of human interaction

Evolutionary Dynamics and Extensive Form Games Ross Cressman, 2003 Evolutionary game theory attempts to predict individual behavior whether of humans or other species when interactions between individuals are modeled as a noncooperative game Most dynamic analyses of evolutionary games are based on their normal forms despite the fact that many interesting games are specified more naturally through their extensive forms Because every extensive form game has a normal form representation some theorists hold that the best way to analyze an extensive form game is simply to ignore the extensive form structure and study the game in its normal form representation This book rejects that suggestion arguing that a game's normal form representation often omits essential information from the perspective of dynamic evolutionary game theory

Osgood, 2015-11-13 A user friendly introduction to some of the most useful analytical tools for model building estimation and analysis presenting key methods and examples Simulation modeling is increasingly integrated into research and policy analysis of complex sociotechnical systems in a variety of domains Model based analysis and policy design inform a range of applications in fields from economics to engineering to health care This book offers a hands on introduction to key analytical methods for dynamic modeling Bringing together tools and methodologies from fields as diverse as computational statistics econometrics and operations research in a single text the book can be used for graduate level courses and as a reference for dynamic modelers who want to expand their methodological toolbox The focus is on quantitative techniques for use by dynamic modelers during model construction and analysis and the material presented is accessible to readers with a background in college level calculus and statistics Each chapter describes a key method presenting an introduction that emphasizes the basic intuition behind each method tutorial style examples references to key literature and exercises The chapter authors are all experts in the tools and methods they present The book covers estimation of model parameters using quantitative data understanding the links between model structure and its behavior and decision support and optimization An online appendix offers computer code for applications models and solutions to exercises Contributors Wenyi An Edward G Anderson Jr Yaman Barlas Nishesh Chalise Robert Eberlein Hamed Ghodusi Winfried Grassmann Peter S Hovmand Mohammad S Jalali Nitin Joglekar David Keith Juxin Liu Erling Moxnes Rogelio Oliva Nathaniel D Osgood Hazhir Rahmandad Raymond Spiteri John Sterman Jeroen Struben Burcu Tan Karen Yee G nen Y cel

Moral Sentiments and Material Interests Herbert Gintis, 2005 Moral Sentiments and Material Interests presents an innovative synthesis of research in different disciplines to argue that cooperation stems not from the stereotypical selfish agent acting out of disguised self interest but from the presence of strong reciprocators in a social group Presenting an overview of research in economics anthropology evolutionary and human biology social psychology and

sociology the book deals with both the theoretical foundations and the policy implications of this explanation for cooperation Chapter authors in the remaining parts of the book discuss the behavioral ecology of cooperation in humans and nonhuman primates modeling and testing strong reciprocity in economic scenarios and reciprocity and social policy The evidence for strong reciprocity in the book includes experiments using the famous Ultimatum Game in which two players must agree on how to split a certain amount of money or they both get nothing

Neopatrimonialism in Africa and Beyond Daniel C. Bach, Mamoudou Gazibo, 2013-03-01 Neopatrimonialism a system whereby rulers use state resources for personal benefit and to secure the loyalty of clients in the general population is central to any teaching or conceptualisation of contemporary African politics This book is a theoretical and comparative study of neopatrimonialism in Africa and across world regions Although such practices are widespread in other parts of the world the African neopatrimonial state has also become a global prototype of the anti developmental state This volume calls for a reappraisal of the genesis and interpretations of the concepts of patrimonialism and neopatrimonialism Expert contributors consider recent debates in Africa through the study of democracy clientelism the big man syndrome Kenya the rise of godfatherism Nigeria warlordism Liberia and the neopatrimonial state on a day to day basis Niger They discuss patrimonialism and neopatrimonialism from Latin America to Europe Central Asia and Asia Pacific to weave a comparative analysis of the interplay between public policies and private interest Neopatrimonialism in Africa and Beyond is an important and timely volume that will be of interest to students and scholars of international politics African studies sociology and international development

Evolutionary Games and Equilibrium Selection Larry Samuelson, 1997 The author examines the interplay between evolutionary game theory and the equilibrium selection problem in noncooperative games Evolutionary game theory is one of the most active and rapidly growing areas of research in economics Unlike traditional game theory models which assume that all players are fully rational and have complete knowledge of details of the game evolutionary models assume that people choose their strategies through a trial and error learning process in which they gradually discover that some strategies work better than others In games that are repeated many times low payoff strategies tend to be weeded out and an equilibrium may emerge Larry Samuelson has been one of the main contributors to the evolutionary game theory literature In *Evolutionary Games and Equilibrium Selection* he examines the interplay between evolutionary game theory and the equilibrium selection problem in noncooperative games After providing an overview of the basic issues of game theory and a presentation of the basic models the book addresses evolutionary stability the dynamics of sample paths the ultimatum game drift noise backward and forward induction and strict Nash equilibria

Interdisciplinary Applications of Agent-Based Social Simulation and Modeling Adamatti, Diana Francisca, Dimuro, Graçaliz Pereira, Coelho, Helder, 2014-04-30 Social simulation can be a difficult discipline to encompass fully There are many methods models directions and theories that can be discussed and applied to various social sciences Anthropology sociology political science economy government and management can all benefit from

social simulation Interdisciplinary Applications of Agent Based Social Simulation and Modeling aims to bring a different perspective to this interdisciplinary topic This book presents current discussions and new insights on social simulation as a whole focusing on its dangers pitfalls deceits and challenges This book is an essential reference for researchers in this field professionals using social simulation and even students studying this discipline **Game Theory and the Social Contract:**

Just playing K. G. Binmore,1994 Written for an interdisciplinary audience Just Playing offers a panoramic tour through a range of new and disturbing insights that game theory brings to anthropology biology economics philosophy and psychology

The Theory of Learning in Games Drew Fudenberg,David K. Levine,1998 This work explains that equilibrium is the long run outcome of a process in which non fully rational players search for optimality over time The models they explore provide a foundation for equilibrium theory and suggest ways for economists to evaluate and modify traditional equilibrium concepts *Population Games and Evolutionary Dynamics* William H. Sandholm,2010-12-17 A systematic rigorous

comprehensive and unified overview of evolutionary game theory This text offers a systematic rigorous and unified presentation of evolutionary game theory covering the core developments of the theory from its inception in biology in the 1970s through recent advances Evolutionary game theory which studies the behavior of large populations of strategically interacting agents is used by economists to make predictions in settings where traditional assumptions about agents rationality and knowledge may not be justified Recently computer scientists transportation scientists engineers and control theorists have also turned to evolutionary game theory seeking tools for modeling dynamics in multiagent systems *Population Games and Evolutionary Dynamics* provides a point of entry into the field for researchers and students in all of these disciplines The text first considers population games which provide a simple powerful model for studying strategic interactions among large numbers of anonymous agents It then studies the dynamics of behavior in these games By introducing a general model of myopic strategy revision by individual agents the text provides foundations for two distinct approaches to aggregate behavior dynamics the deterministic approach based on differential equations and the stochastic approach based on Markov processes Key results on local stability global convergence stochastic stability and nonconvergence are developed in detail Ten substantial appendixes present the mathematical tools needed to work in evolutionary game theory offering a practical introduction to the methods of dynamic modeling Accompanying the text are more than 200 color illustrations of the mathematics and theoretical results many were created using the Dynamo software suite which is freely available on the author s Web site Readers are encouraged to use Dynamo to run quick numerical experiments and to create publishable figures for their own research **Models of Society and Complex Systems**

Sebastian Ille,2022-11-24 *Models of Society and Complex Systems* introduces readers to a variety of different mathematical tools used for modelling human behaviour and interactions and the complex social dynamics that drive institutions conflict and coordination What laws govern human affairs How can we make sense of the complexity of societies and how do

individual actions characteristics and beliefs interact Social systems follow regularities which allow us to answer these questions using different mathematical approaches This book emphasises both theory and application It systematically introduces mathematical approaches such as evolutionary and spatial game theory social network analysis agent based modelling and chaos theory It provides readers with the necessary theoretical background of each toolset as well as the underlying intuition while each chapter includes exercises and applications to real world phenomena By looking behind the surface of various social occurrences the reader uncovers the reasons why social systems exhibit both cultural universals and at the same time a diversity of practices and norms to a degree that even surpasses biological variety or why some riots turn into revolutions while others do not even make it into the news This book is written for any scholar in the social sciences interested in studying and understanding human behaviour social dynamics and the complex systems of society It does not expect readers to have a particular background apart from some elementary knowledge and affinity for mathematics

Theories of Informetrics and Scholarly Communication Cassidy R. Sugimoto, 2016-02-22 Scientometrics have become an essential element in the practice and evaluation of science and research including both the evaluation of individuals and national assessment exercises Yet researchers and practitioners in this field have lacked clear theories to guide their work As early as 1981 then doctoral student Blaise Cronin published The need for a theory of citing a call to arms for the fledgling scientometric community to produce foundational theories upon which the work of the field could be based More than three decades later the time has come to reach out the field again and ask how they have responded to this call This book compiles the foundational theories that guide informetrics and scholarly communication research It is a much needed compilation by leading scholars in the field that gathers together the theories that guide our understanding of authorship citing and impact

The Incentivised University Seán Mfundza Muller, 2022-01-24 The core thesis of this book is that to understand the implications of incentive structures in modern higher education we require a deeper understanding of associated issues in the philosophy of science Significant public and philanthropic resources are directed towards various forms of research in the hope of addressing key societal problems That view and the associated allocation of resources relies on the assumption that academic research will tend towards finding truth or at least selecting the best approximations of it The present book builds on and extends contributions in philosophy and higher education to argue that this assumption is misplaced with serious implications for modern higher education and its role in informing societal decisions and government policy The book develops a philosophical foundation for the analysis of the connection between higher education incentives scientific progress and societal outcomes That in turn is used to demonstrate how the current approach to incentivising intellectual and scientific progress is likely not only to fail but in fact to cause harm on the very dimensions it purports to improve The arguments presented are illustrated with examples from medicine and academic economics making the book one of the first to examine issues of scientific progress and social consequences across the human and social sciences In

doing so it develops a novel critique of modern economics that in turn provides a more philosophically substantive foundation for popular critiques of economics than has existed to date *Mathematical Analysis, Differential Equations And Applications* Panos M Pardalos, Themistocles M Rassias, 2024-07-26 This comprehensive volume presents essential mathematical results devoted to topics of mathematical analysis differential equations and their various applications It focuses on differential operators Wardowski maps low oscillation functions Galois and Pataki connections Hardy type inequalities to name just a few Effort has been made for this unique title to have an interdisciplinary flavor and features several applications such as in tomography elastic scattering fluid mechanics etc This work could serve as a useful reference text to benefit professionals academics and graduate students working in theoretical computer science computer mathematics and general applied mathematics *Evolutionary Computation in Economics and Finance* Shu-Heng

Chen, 2013-11-11 After a decade s development evolutionary computation EC proves to be a powerful tool kit for economic analysis While the demand for this equipment is increasing there is no volume exclusively written for economists This volume for the first time helps economists to get a quick grasp on how EC may support their research A comprehensive coverage of the subject is given that includes the following three areas game theory agent based economic modelling and financial engineering Twenty leading scholars from each of these areas contribute a chapter to the volume The reader will find himself treading the path of the history of this research area from the fledgling stage to the burgeoning era The results on games labour markets pollution control institution and productivity financial markets trading systems design and derivative pricing are new and interesting for different target groups The book also includes informations on web sites conferences and computer software *Heterodox Macroeconomics* Jonathan P. Riechmann, 2012-12-06 It took me over five years to write this book Finishing my research project and thus finishing this book would not have been possible without the help of many friends of mine Thus the first thing to do is to say Thanks a lot This means at first place the Evangelisches Studienwerk Haus Villigst They gave me a grant for my work thus laying the important financial grounds of everything I ve done There is such a large number of friends I worked and lived with over the last few years that I cannot possibly mention them all by name but I ll try anyway So thanks Christiane Gilbert Maik Karl and everybody else feeling that his or her name should appear in this list And of course thanks Franz Haslinger for letting me do whatever I wanted to and for even encouraging me to stick with it One more thing I d like to mention Although this work is based on very heavy use of computer power it is my special pride to say that not a single penny i e Deutschmark had to be spent for software in order to do this work Instead all that has been done has been done by free software Thus I would like to mention some of my most heavily used software tools in order to let you the reader know that nowadays you don t depend on

big commercial software packages any more *An Introduction to Game-Theoretic Modelling: Third Edition* Mike Mesterton-Gibbons, 2019-07-05 This book introduces game theory and its applications from an applied mathematician's perspective systematically developing tools and concepts for game theoretic modelling in the life and social sciences Filled with down to earth examples of strategic behavior in humans and other animals the book presents a unified account of the central ideas of both classical and evolutionary game theory Unlike many books on game theory which focus on mathematical and recreational aspects of the subject this book emphasizes using games to answer questions of current scientific interest In the present third edition the author has added substantial new material on evolutionarily stable strategies and their use in behavioral ecology The only prerequisites are calculus and some exposure to matrix algebra probability and differential equations
