Carlarne,2010 Existing climate change governance regimes in the US and the EU contain complex mixtures of regulatory market voluntary and research based strategies The EU has adopted an approach to climate change that is based on mandatory greenhouse gas emission reductions it is grounded in hard law measures and accompanied by soft law measures at the regional and Member State level In contrast until recently the US federal government has carefully avoided mandatory emission reduction obligations and focused instead on employing a variety of soft measures to encourage rather than mandate greenhouse gas emission reductions in an economically sound market driven manner These macro level differences are critical yet they mask equally important transatlantic policy convergences The US and the EU are pivotal players in the development of the international climate change regime How these two entities structure climate change laws and policies profoundly influences the shape and success of climate change laws and policies at multiple levels of governance This book suggests that the overall structures and processes of climate change law and policy making in the US and the EU are intricately linked to international policy making and thus the long term success of global efforts to address climate change Accordingly the book analyses the content and process of climate change law and policy making in the US and the EU to reveal policy convergences and divergences and to examine how these convergences and divergences impact the ability of the global community to structure a sustainable effective and equitable long term climate strategy Finding Legal Information David Pester,2003-09-30 Given the vast amount of legal information available it is sometimes very difficult and certainly very time consuming to know where to start looking for the specific information you require This book covering the most up to date information sources printed and electronic helps guide the reader towards the information they need It is an accessible and easy to use directory of legal information sources for librarians lawyers students and anyone needing legal information The book covers mainly British and European Union law and includes general material and the main subject areas including online and internet sources It also lists reference material such as legal dictionaries and directories The book is essentially a directory of information sources with publishing details including ISBN and short comments where useful Electronic sources are mentioned where relevant with details of scope and any limitations of coverage Comprehensive and up to date covering electronic sources and important legal developments including civil procedure and human rights Covers the massive expansion of information on the web and online services Based on the author s considerable experience thus he has gained a detailed and wide ranging understanding and appreciation of users needs and areas of interest *Consumer Sourcebook* Matthew Miskelly,2007-06-20 P IConsumer Sourcebook I provides a comprehensive digest of accessible resources and advisory information for the American consumer This new edition identifies and describes some 23 000 programs and services available to the general public at little or no cost These services are provided by federal state county and local governments and their agencies as well as by organizations and associations PConsumer affairs and customer services departments for corporations are also listed as well as related publications multimedia products general tips and

Indigenous Peoples and Climate Justice Giada Giacomini,2022-10-10 This book provides a new interpretation of international law specifically dedicated to Indigenous peoples in the context of a climate justice approach The book presents a critical analysis of past and current developments at the intersection of human rights and international environmental law and governance The book suggests new ways forward and demonstrates the need for a paradigmatic shift that would enhance the meaningful participation of Indigenous peoples as fundamental actors in the conservation of biodiversity and in the fight against climate change The book offers guidance on a number of critical intersecting and interdependent issues at the forefront of climate change law and policy inside and outside of the UN climate change regime The author suggests that the adoption of a critical perspective on international law is needed in order to highlight inherent structural and systemic issues of the international law regime which are all issues that ultimately impede the pursue of climate justice for Indigenous peoples

Karen Hulme,2004-08-01 In the recent past the horrors of war have been demonstrated all too vividly Who would have believed that after Nuremberg there would be any further need for war crimes tribunals or for the creation of an international criminal court But whilst people in conflict countries suffer the mental and physical scars from military bombardment they also suffer the silent legacy of environmental pollution The world functions as one large ecosystem the contamination of one element inevitably feeding into another Pollution in peacetime has been greatly reduced but what is the wartime cost to the environment Wartime weaponry and tactics are strictly controlled by the principles of humanitarian law but international law can be a slow creature Are our militaries using weapons today that violate the current laws of armed conflict Or need new controls be drafted to deal with the environmental and inevitably human consequences of modern warfare The book seeks to analyse the issues surrounding the protection of the environment in times of armed conflict and to pose questions as to its adequacy and efficacy But the focus is not simply upon the interpretation of the legal provisions in isolation instead the analysis establishes a benchmark standard of environmental harm against which the adequacy and efficacy of the legal provisions can be measured At the centre of the analysis are a number of case studies tackling the most modern weapons and tactics including the legality of depleted uranium weapons and cluster bombs the validity of striking chemical weapons facilities and oil installations and the responsibility for explosive and non explosive war debris
