The Evolutionary Process A Critical Review Of Evolutionary Theory:

The Evolutionary Process Verne Grant, 1985-01-01 An examination of the processes that produce evolutionary change includes discussions of speciation natural selection and acquired characters

The Evolutionary Process Verne Grant, 1991 The Evolutionary Process Verne Grant, 1985 Providing a clear and thorough review of the active field of organic evolution the author describes the processes that bring about evolutionary change and the factors that affect these processes He covers a broad range of subjects placing classical and recent research in perspective and clarifying current controversies

Epistasis and the Evolutionary Process Jason B. Wolf, Edmund D. Brodie, Michael John Wade, 2000 Over the last two decades research into epistasis has seen explosive growth and has moved the focus of research in evolutionary genetics from a traditional additive approach We now know the effects of genes are rarely independent and to reach a fuller understanding of the process of evolution we need to look at gene interactions as well as gene environment interactions This book is an overview of non additive evolutionary genetics integrating all work to date on all levels of evolutionary investigation of the importance of epistasis in the evolutionary process in general It includes a historical perspective on this emerging field in depth discussion of terminology discussions of the effects of epistasis at several different levels of biological organization and combinations of theoretical and experimental approaches to analysis

Evolutionary processes and theory Eviatar Nevo, 2012-12-02 Evolutionary Processes and Theory contains the proceedings of a workshop held in Israel in March 1985 Contributors explore evolutionary processes and theory and highlight advances in knowledge concerning differentiation metabolic and immunological mechanisms and the molecular biology of the genome Issues that are being debated are also considered including the origin and evolution of sexual systems the genetics of altruism and general forms and levels of social evolution This volume is organized into six sections encompassing 33 chapters and begins with an overview of the evolutionary problems of molecular biology Some chapters are devoted to topics such as the role of gene regulation in evolutionary processes the structural diversity and evolution of intermediate filament proteins and adaptation and evolution in the immune system The next section examines the tempo and mode of molecular evolution including that of hybrid dysgenesis systems as well as the statistical aspects of the molecular clock Later chapters focus on DNA and protein sequences sexual selection and speciation and the relation between speciation mechanisms and macroevolutionary patterns The book also methodically explains population genetics with particular reference to the altruistic behavior in sibling groups with unrelated intruders the endosperm evolution in higher plants and the evolutionary aspects of sexual reproduction in predominantly asexual populations This book will be of interest to geneticists and molecular biologists

The Evolution of Agency and Other Essays Kim Sterelny, 2001 This book presents a collection of linked essays written by one of the leading philosophers of biology Kim Sterelny on the topic of biological evolution The first half of the book explores most of the main theoretical controversies about evolution and selection Sterelny argues that genes are not the only replicators non genetic

inheritance is also extremely important and is no mere epiphenomenon of gene selection The second half of the book applies some of these ideas in considering cognitive evolution Concentrating on the mental capacities of simpler animals rather than those of humans Sterelny argues for a general distinction between detection and representation and that the evolution of belief like that of representation can be decoupled from the evolution of preference These essays some never before published form a coherent whole that defends not just an overall conception of evolution but also a distinctive take on cognitive evolution

The Genius of George Bernard Shaw Samiran Kumar Paul, 2020-12-04 The Genius of George Bernard Shaw is a criticism of George Bernard Shaw's work that explores his art aesthetics philosophy and revolutionary ideas Shaw wrote his plays raising and dealing with the problems of individuals families society nations and the world It is occasionally stated that Shaw's support for totalitarianism grew out of his frustration with nineteenth century liberalism which ineffectually culminated in a disastrous world war Yet close analysis to two of Shaw's Major Critical Essays from the 1890s shows that even then Shaw expressed a desire for a ruthless man of action unencumbered by the burden of conscience to come on the scene and establish a new world order to initiate the utopian epoch Indeed further analysis of a number of plays from before the war shows the impulse to be persistent and undeniable Shaw hated disorder and he wanted to see society managed efficiently by a small caste of technocratic experts who were at the same time in Karl Popper's memorable phrase utopian social engineers He had very little confidence in the average man and woman who could not work mentally at the same speed as the Fabian executive committee his ideal of what a ruling caste would look like Shaw's ideal society what I am calling his utopian vision resembles Plato's ideal city or Comte's Religion of Humanity more than any society that has presumably ever existed on earth This need for absolute order and control found many means of expression in both his life and work and was intricately bound up with his longing for perfection This book is useful for world teachers students and research scholars in English in schools colleges universities all over the world

Evolutionary Dynamics of Organizations Joel A.C. Baum, Jitendra V. Singh, 1994-03-31 This book presents the latest research and theory about organizational evolutionary change It brings together the work of organization theorists who have played key roles in challenging the orthodox adaptation views that prevailed until the beginning of the 1980s Joel A C Baum and Jitendra V Singh emphasize hierarchy of evolutionary processes at the intraorganizational level the organizational level the population level and the community level Derived from a conference held at the Stern School of Business at New York University Evolutionary Dynamics of Organizations is organized in a way that gives order and coherence to what has been a diverse and multidisciplinary field

Toward a New Philosophy of Biology Ernst Mayr, 1988 A collection of twenty eight essays five previously unpublished grouped into nine categories Philosophy Natural Selection Adaptation Darwin Diversity Species Speciation Macroevolution and Historical Perspective The book Ernst Mayr notes in the Foreword is an attempt to strengthen the bridge between biology and philosophy and point to the new direction in which a new philosophy of biology

will move **Keywords in Evolutionary Biology** Evelyn Fox Keller, Elisabeth Anne Lloyd, 1992 In science more than elsewhere a word is expected to mean what it says nothing more nothing less But scientific discourse is neither different nor separable from ordinary language meanings are multiple ambiguities ubiquitous **Keywords in Evolutionary Biology** grapples with this problem in a field especially prone to the confusion engendered by semantic imprecision Written by historians philosophers and biologists including among others Stephen Jay Gould Diane Paul John Beatty Robert Richards Richard Lewontin David Sloan Wilson Peter Bowler and Richard Dawkins these essays identify and explicate those terms in evolutionary biology which though commonly used are plagued by multiple concurrent and historically varying meanings By clarifying these terms in their many guises the editors Evelyn Fox Keller and Elisabeth Lloyd hope to focus attention on major scholarly problems in the field problems sometimes obscured sometimes reveals and sometimes even created by the use of such equivocal words Competition adaptation and fitness for instance are among the terms whose multiple meaning have led to more than merely semantic debates in evolutionary biology Exploring the complexity of keywords and clarifying their role in prominent issues in the field this book will prove invaluable to scientists and philosophers trying to come to terms with evolutionary theory it will also serve as a useful guide to future research into the way in which scientific language works
