## **Skill Measure:**

**A Web-Based Approach to Measure Skill Mismatches and Skills Profiles for a Developing Country:** Jeisson Arley Cárdenas Rubio, 2020-12-30 Several interdisciplinary studies highlight imperfect information as a possible explanation of skill mismatches which in turn has implications for unemployment and informality rates Despite information failures and their consequences countries like Colombia where informality and unemployment rates are high lack a proper labour market information system to identify skill mismatches and employer skill requirements One reason for this absence is the cost of collecting labour market data Recently the potential use of online job portals as a source of labour market information has gained the attention of researchers and policymakers since these portals can provide quick and relatively low cost data collection As such these portals could be of use for Colombia However debates continue about the efficacy of this use particularly concerning the robustness of the collected data This book implements a novel mixed methods approach such as web scraping text mining machine learning etc to investigate to what extent a web based model of skill mismatches can be developed for Colombia The main contribution of this book is demonstrating that with the proper techniques job portals can be a robust source of labour market information In doing so it also contributes to current knowledge by developing a conceptual and methodological approach to identify skills occupations and skill mismatches using online job advertisements which would otherwise be too complex to be collected and analysed via other means By applying this novel methodology this study provides new empirical data on the extent and nature of skill mismatches in Colombia for a considerable set of non agricultural occupations in the urban and formal economy Moreover this information can be used as a complement to household surveys to monitor potential skill shortages Thus the findings are useful for policymakers statisticians and education and training providers among others Basic Hand Tool Skills United States. **Economics and Utopia** Geoffrey M Hodgson, 2002-01-04 Since the fall of the Berlin Wall we have been told that no alternative to Western capitalism is possible or desirable This book challenges this view with two arguments First the above premise ignores the enormous variety within capitalism itself

Second there are enormous forces of transformation within contemporary capitalisms associated with moves towards a more knowledge intensive economy These forces challenge the traditional bases of contract and employment and could lead to a quite different socio economic system Without proposing a static blueprint this book explores this possible scenario *Path Dependence and Regional Economic Renewal* Arne Isaksen, Stig-Erik Jakobsen, 2018-12-07 This book investigates the mechanisms that may stimulate or hamper the renewal of the regional industry structure Recent years have witnessed a strong interest in and need for the modernization and upgrading of existing industries and the introduction of new industries Informed by the evolutionary perspective this book argues that innovations within existing industry paths and the creation of new industries are strongly rooted in the established economic practice Historically developed skills existing industrial structure and regional and extra regional networks form the basis for future regional growth This volume consists of 11 chapters studying different aspects of regional industrial path development illustrated with cases from Norway Sweden and Spain The book also look into the role of policy for regional economic renewal and argues that economic renewal is fostered by policies that incorporate both actor based and system based elements Such policy mix will provide a vital push towards renewal and new path development The chapters were originally published as a special issue in *European Planning Studies*
