The Birds World Nicolae Sfetcu,2021-10-25 Birds are among the most extensively studied of all animal groups Hundreds of academic journals and thousands of scientists are devoted to bird research while amateur enthusiasts called birdwatchers or more commonly birders probably number in the millions Birds are categorised as a biological class Aves The earliest known species of this class is Archaeopteryx lithographica from the Late Jurassic period According to the most recent consensus Aves and a sister group the order Crocodilia together form a group of unnamed rank the Archosauria Phylogenetically Aves is usually defined as all descendants of the most recent common ancestor of modern birds or of a specific modern bird species like Passer domesticus and Archaeopteryx Modern phylogenies place birds in the dinosaur clade Theropoda Modern birds are divided into two superorders the Paleognathae mostly flightless birds like ostriches and the wildly diverse Neognathae containing all other birds **The Shorebird Guide** Michael O'Brien,Richard Crossley,Kevin Karlson,2006 When many birders go out looking at shorebirds they see a distant mud flat full of grayish brown birds in various shapes and sizes and have no idea where to begin the identification process When advanced birders look at that same flock of shorebirds they can identify the vast majority of birds with a quick binocular scan Experts use the simplest most easily observed characteristics size structure behavior and general color patterns almost subconsciously and can identify most birds even before looking carefully at plumage details Now birders of all levels can learn how to identify these wildly popular birds quickly and with much less effort This guide provides more than 870 stunning color photographs sequenced to give a general impression of a species first and progressing to a more detailed image of the bird throughout its life cycle Captions list characteristics in order of importance reflecting the thought process that experts use to identify birds

Weick, Jan-Hendrik Becking, 2009-01-01 Owls are enduringly popular birds but due to their nocturnal habits most species are difficult to see well. The plumages of many species are cryptic and difficult to separate by plumage alone. This problem is compounded by the different morphs that many adopt. This book fully describes every known species and subspecies of owl as well as presenting the latest evidence on owl taxonomy based on DNA work and vocalisations. Because voice is vital in owl identification much emphasis is placed on it in the book and sonograms are provided for many species. A CD of owl vocalisations will accompany the book.

Finding Birds in Australia's Northern Territory D Donato, P Wilkins, G Smith, L Alford, 1997-07-01 Birds are a prominent feature of the Northern Territory environment with almost half of Australia's bird species found there in spectacular landscapes ranging from deserts to tropics. This guide will lead you to the Northern Territory's best birdwatching areas and help you find the birds. It is designed to be used in conjunction with one of the Australian field identification guides. The book has four main sections: habitats, areas, special birds, and a checklist. The text does not discuss every bird likely to be found in every area; instead, it points out interesting species found at each site. The special birds section covers birds considered to be special to the Northern Territory and includes tips on finding the birds and local identification hints.

Munias and Mannikins Robin Restall, 2010-08-30 This book covers 43 species of munias and mannikins. Munias are widespread throughout the Old World's tropical regions. In their natural habitat they are birds of the savanna but they have adapted to a number of different habitats including areas inhabited by humans. They range in size from the Java sparrow which is about the size of a common starling to the diminutive Madagascar mannikin. Their striking plumage makes them popular as cagebirds and they breed readily in captivity. The author has recently described one new species and ten new subspecies to science.
