A Test of Mirrors Ken Petti, John Amodeo, Cassandra Westwood, Tracey West, 2004 On the planet Azureblue on the eve of her thirteenth birthday Zenda finds the final three musings from her broken gazing ball and is able to attend the harana ceremony that will reveal her personal gifts and guide her life's work *A Test of Mirrors* Cassandra Westwood, Ken Petti, John Amodeo, PH.D., 2004-11-01 On the planet Azureblue on the eve of her thirteenth birthday Zenda finds the final three musings from her broken gazing ball and is able to attend the harana ceremony that will reveal her personal gifts and guide her life's work **NASA Technical Note** ,1971 **Dimensional-stability Studies of Candidate Space-telescope Mirror-substrate Materials** John M. Jerke, 1972 The effects of aging vacuum exposure and thermal cycling on the dimensional stability of mirror substrate materials fused silica Cer Vit Kanigen coated beryllium polycrystalline silicon and U L E fused silica were investigated A multiple beam interferometer was used to determine nonrecoverable surface shape changes of the 12.7 cm diameter mirrors with substrates of these materials Thermal cycling and aging in vacuum produced the largest changes but only a few were as large as 1.30 wavelength where the wavelength was 632.8 nm **Thermal Design and Test Results for SUNLITE Ultra-stable Reference Cavity** Ruth M. Amundsen, 1991 *Animal-friendly methods for rodent behavioral testing in neuroscience research* Raffaele d'Isa, Stefania Fasano, Riccardo Brambilla, 2024-07-03 Rodent behavioral testing has been used to study brain functions since the 1890s and has become a gold standard model in modern neuroscience Up to the 1950s most behavioral tests on laboratory rodent models were based on punishments and rewards Both approaches can lead to a certain degree of animal pain or suffering Punishments involved the employment of painful stimuli typically electric shocks Passive avoidance and fear conditioning tests among the most widely used behavioral paradigms used to evaluate learning and memory in rodents can be performed using only a single brief shock Other tests such as the active avoidance might require up to tens or hundreds of shocks strongly challenging the psychological welfare of the model animals On the other hand tests based on rewards which apparently may seem more ethical actually still induce suffering in the animals as food rewards are almost always associated with a food restriction protocol in order to motivate food seeking behavior Rodents are starved for days before starting the test and kept under food restriction for the whole duration of the test The distress during the testing session is only a minimal part compared to the stress lived outside of the testing session which is prolonged and continuous Analogously liquid rewards commonly rely on a previous water restriction protocol to use thirst as motivation Animal stress is not only an ethical issue per se but also an important factor potentially impacting on the reliability and reproducibility of experimental results **Transactions of the American Institute of Electrical Engineers** ,1915 *Handbook of Testing Materials* Adolf Martens, 1899

The Design and Construction of Large Optical Telescopes Pierre

Bely,2006-05-26 There is no dearth of books on telescope optics and indeed optics is clearly a

key element in the design and construction of telescopes But it is by no means the only important element As telescopes become larger and more costly other aspects such as structures pointing wavefront control enclosures and project management become just as critical Although most of the technical knowledge required for all these fields is available in various specialized books journal articles and technical reports they are not necessarily written with application to telescopes in mind This book is a first attempt at assembling in a single text the basic astronomical and engineering principles used in the design and

construction of large telescopes. It aims to broadly cover all major aspects of the field from the fundamentals of astronomical observation to optics, control systems, structural mechanical and thermal engineering as well as specialized topics such as site selection and program management. This subject is so vast that an in-depth treatment is obviously impractical. Our intent is therefore only to provide a comprehensive introduction to the essential aspects of telescope design and construction. This book will not replace specialized scientific and technical texts. But we hope that it will be useful for astronomers, managers and systems engineers who seek a basic understanding of the underlying principles of telescope making and for specialists who wish to acquaint themselves with the fundamental requirements and approaches of their colleagues in other disciplines.
