Psychology is of interest to academics from many fields as well as to the thousands of academic and clinical psychologists and general public who can't help but be interested in learning more about why humans think and behave as they do. This award-winning twelve-volume reference covers every aspect of the ever-fascinating discipline of psychology and represents the most current knowledge in the field. This ten-year revision now covers discoveries based in neuroscience, clinical psychology's new interest in evidence-based practice and mindfulness, and new findings in social, developmental, and forensic psychology.

**What Psychotherapists Should Know About Disability** Rhoda Olkin, 2012-04-06. This comprehensive volume provides the knowledge and skills that mental health professionals need for more effective, informed work with clients with disabilities. Combining her extensive knowledge as a clinician, researcher, and teacher with her personal experience as someone with a disability, Olkin provides an insider's perspective on critical issues that are often overlooked in training. A lucid conceptual framework is presented for understanding disability as a minority experience, one that is structured by social, legal, and attitudinal constraints, as well as physical challenges. Illuminating frequently encountered psychosocial themes and concerns, chapters describe a range of approaches to dealing with disability issues in the treatment of adults, children, and families. Topics addressed include etiquette with clients with disabilities, special concerns in assessment, evaluation, and diagnosis, the impact of disability on sexuality and romance, as well as pregnancy, birthing, and parenting, the use of assistive technology, and devices, disability and substance abuse, and more. Filled with clinical examples and observations, the volume also discusses strategies for enhancing teaching, training, and research.

**Developmental Screening in Early Childhood** Samuel J. Meisels, Sally Atkins-Burnett, 1994.

**Autism** Steven E. Hyman, 2013-10-08. First published in 2001, this is Volume 2 in a series on the science of mental health and focuses on Autism. It begins with an overview presentation of a case and a recent consensus description of diagnostic instruments for autistic spectrum disorders. This is followed by recent epidemiologic data. Epidemiology has an enhanced prominence in studies of autism because there is an unresolved controversy about the incidence of new cases of autism. In some surveys, the incidence of autism appears to be increasing, and the controversy is over whether this is a true observation or whether greater diagnostic awareness is leading to the apparent increase. This volume attempts to resolve the conflicting data as if autism is indeed on the rise, there must be a new significant environmental risk factor which has to be identified with a view to prevention.

**Treating Explosive Kids** Ross W. Greene, J. Stuart Ablon, 2005-10-18. The first comprehensive presentation for clinicians of the groundbreaking approach popularized in Ross Greene's acclaimed parenting guide, *The Explosive Child*, this book provides a detailed framework for effective individualized intervention with highly oppositional children and their families. Many vivid examples and Q & A sections show how to identify the specific cognitive factors that contribute to explosive and noncompliant behavior, remediate these factors, and teach children and their adult caregivers how to solve problems collaboratively. The book also describes challenges that may arise in implementing the model and provides clear and practical solutions. Two special chapters focus

on intervention in schools and in therapeutic restrictive facilities      Practitioner's Guide to Developmental and Psychological Testing Glen P. Aylward, 2013-06-29 The practice of primary health care has expanded beyond the traditional medical model Primary care physicians and allied professionals are called upon more frequently to address parental concerns about developmental delays poor school performance or behavioral problems As a result pediatricians family practitioners pediatric nurses social workers and speech language specialists are faced with the issue of developmental and psychological testing The degree of the clinician's involvement in testing varies from interpretation of reports to performing screening or assessments In many cases the primary health care professional assumes the role of case manager Unfortunately cooperation between disciplines often has been limited because of poor communication particularly in regard to developmental and psychological testing where acronyms statistics and jargon abound Even professionals from mental health disciplines such as child psychiatrists or psychiatric social workers sometimes are overwhelmed The purpose of this book therefore is to provide the clinician with practical information regarding developmental and psychological testing thereby making the health care professional an educated consumer This text does not simply describe how psychologists perform testing rather it provides information to help clinicians understand what the tests contain what their strengths and limitations are and how they can be incorporated into practice      *Current Catalog* National Library of Medicine (U.S.), First multi year cumulation covers six years 1965-70
