Texinfo The Gnu Documentation Format 4:

Gnu Texinfo 6.0: The Gnu Documentation Format Robert J. Chassell,Richard M. Stallman,2015-11-11 Texinfo is a documentation system that uses a single source file to produce both online information and printed output This means that instead of writing two different documents one for the online information and the other for a printed work you need write only one document Therefore when the work is revised you need revise only that one document Texinfo s markup commands are almost entirely semantic that is they specify the intended meaning of text in the document rather than physical formatting instructions Texinfo was devised for the purpose of writing software documentation and manuals It is not and was never intended to be a general purpose formatting program If you need to lay out a newspaper devise a glossy magazine ad or follow the exact formatting requirements of a publishing house Texinfo is not the simplest tool On the other hand if you want to write a good manual for your program Texinfo has many features that will make your job easier Overall it s intended to let you concentrate on the content and thus provides almost no commands for controlling the final formatting **Texinfo** Robert J.
