Britton, Arthur C. Graesser, 2014-02-25 What is text understanding It is the dynamic process of constructing coherent representations and inferences at multiple levels of text and context within the bottleneck of a limited capacity working memory The field of text and discourse has advanced to the point where researchers have developed sophisticated models of comprehension and identified the particular assumptions that underlie comprehension mechanisms in precise analytical or mathematical detail The models offer a priori predictions about thought and behavior not merely ad hoc

descriptions of data. Indeed, the field has evolved to a mature science. The contributors to this volume collectively cover the major models of comprehension in the field of text and discourse. Other books are either narrow, covering only a single theoretical framework, or do not focus on systematic modeling efforts. In addition, this book focuses on deep levels of understanding rather than language codes, syntax, and other shallower levels of text analysis. As such, it provides readers with up-to-date information on current psychological models specified in quantitative or analytical detail.

The Interface between Scientific and Technical Translation Studies and Cognitive Linguistics Ralph Krüger, 2015-04-17

Scientific and Technical Translation (STT) is a highly complex and knowledge-intensive field of translation, and cognitive linguistics is a usage-based linguistic framework which provides powerful theoretical tools for modelling knowledge organisation and representation in discourse. This book explores the interface between scientific and technical translation studies and cognitive linguistics by discussing the epistemological, contextual, textual, and cross-linguistic dimensions of scientific and technical translation from a cognitive linguistic perspective. Particular emphasis is placed on explicitation and implicature as indicators of the interaction between text and context in STT. The corpus-based investigation of the two phenomena illustrates the complex knowledge requirements pertaining to scientific and technical translation and demonstrates the explanatory power of cognitive linguistics with regard to important textual and contextual aspects of STT.
