networks and collaboration in the innovation process Partnership and Leadership T. de Bruijn, Arnold Tukker, 2013-10-14

Sustainable development has become a central perspective in environmental strategies around the world. It is clear that neither governments nor businesses have the capability to bring about sustainability on their own. Therefore, collaboration has emerged as a central concept. At the same time, it is obvious that someone has to take the lead in the development towards sustainability. This book focuses on different forms of collaboration emerging between various actors. The objective of the book is to more systematically explore the different roles and relationships between partnership and leadership. Basically, both partnership and leadership can be seen in a positive and negative way. For example, as far as partnership is concerned, we can assume that the path towards sustainability can be paved by parties coming together, taking some initiative, collaborating. On the opposite, partnership and consensus-based decisions can be seen as an obstacle to foster radical changes in production and consumption patterns. Similarly, leadership can be seen as an obstacle to sustainable development if leaders form close circles and are not willing to share experiences with other actors, but leadership could also be considered as an important element to keep concepts and practices forward. The book holds this double perspective, explaining mapping and analyzing different goals, formats, methods of more and less collaborative approaches, but at the same time taking a critical approach to the theme by understanding related risks, effects, prospects, and corrective actions. Next to a conceptual part, the book brings together case studies from around the world. The focus is in describing and understanding various formats of collaboration and critically evaluating its effects and prospects. A concluding chapter discusses the role of partnership and leadership in realizing various levels of environmental innovations, optimization, and re-design that usually affect only a small part of the production-consumption structure and much more complicated radical innovations that have to deal with societal sub-systems. The book is in part an edited version of selected papers presented during the 1998 Greening of Industry Conference in Rome on the subject, enriched with contributions of other invited authors.

Industrial Policies After 2000 Wolfram Elsner, John Groenewegen, 2012-12-06

Industrial Policies after 2000 investigates industrial policy during a time of deregulation, privatization, and a growing interest in small government. This book brings together scholarship from different countries, different institutional contexts, and different theoretical perspectives. That includes the neoclassical market approach, game theoretical models, and institutional economics.

Technological Change in the Modern Economy Paul R. Beije, 1998

Technological Change in the Modern Economy presents an authoritative overview of the economics of technological change. Using an empirical foundation, it examines the economic causes and effects of technological innovation. It also analyzes the process of innovation itself. The author first provides an introduction to innovation and technical change. He expands this to include issues such as innovation and economic growth, the organization of innovation, innovation and competition, and the role of government. He also discusses new topics such as technological cooperation, the spillover effects of research, the firm as a learning organization, and national systems of innovation. These issues are analysed empirically.

employing theoretical explanations to support case studies on Europe The United States and Japan The book uses an institutional economics approach discussing the role of various actors such as individual inventors research departments of private firms and public research institutes The book will provide an introduction to the economics of innovation for advanced undergraduates and for managers and public administrators involved in innovation It will also be of interest to those studying industrial organization and institutional economics and will be accessible to those from business administration and management science

The Invisible Industrialist J. Gaudillière, 1998-07-13 Industrial methods and industrially produced instruments reagents and living organisms are central to research activities today They play a key role in the homogenization and the diffusion of laboratory practices thus in their transformation into a stable and unproblematic knowledge about the natural world This book displays the frequently invisible role of industry in the construction of fundamental scientific knowledge through the examination of case studies taken from the history of nineteenth and the twentieth century physics chemistry and biomedical sciences
