Technological Imperative In Medicine:

The Technological Imperative in Medicine Stewart Wolf, 1980 **The Technological Imperative in Medicine** Stewart Wolf, 2012-12-06 This volume contains the edited proceedings of a Totts Gap Colloquium held June 15 to 17 1980 at Totts Gap Medical Research Laboratories in Bangor Pennsylvania under the sponsorship of three neighboring community hospitals in the Lehigh Valley St Luke's Hospital of Bethlehem Easton Hospital of Easton and Muhlenberg Medical Center of Bethlehem The objective of the meeting was to examine from several points of view the impact of rapidly proliferating technology on medical education practice and research on hospitals and on the community at large The participants were selected not only for their diversity of experience and point of view but also for ability to listen as well as to speak They were asked to examine in an informal analytical dialogue the effects on the quality and cost of health care and health education brought about by increasing reliance on medical technology A further aim was to explore various strategies through which might be devised an affordable way to benefit fully from technological advances without compromising human initiative or diminishing emphasis on clinical judgment and effective communication between doctor and patient The participants included a medical student seasoned practitioners and medical educators young specialists researchers administrators and members of boards of trustees of community hospitals and laymen as follows Dr Robert Ackerman Associate Professor of Radiology Harvard Medical School and Director of the Carotid Evaluation and Cerebral Blood Flow Laboratories at Massachusetts General Hospital Dr Paul B *The Ethical Challenges of Emerging Medical Technologies* Arthur L. Caplan, Brendan Parent, 2020-09-10 This collection of essays emphasizes society's increasingly responsible engagement with ethical challenges in emerging medical technology Expansion of technological capacity and attention to patient safety have long been integral to improving healthcare delivery but only relatively recently have concepts like respect distributive justice privacy and autonomy gained some power to shape the development use and refinement of medical tools and techniques Medical ethics goes beyond making better medicine to thinking about how to make the field of medicine better These essays showcase several ways in which modern ethical thinking is improving safety efficacy and efficiency of medical technology increasing access to medical care and empowering patients to choose care that comports with their desires and beliefs Included are complimentary ethical approaches as well as compelling counter arguments Together the articles demonstrate how improving the quality of medical technology relies on every stakeholder not just medical researchers and scientists to assess each given technology's strengths and pitfalls This collection also portends one of the next major issues in the ethics of medical technology developing the requisite moral framework to accompany shifts toward patient centred personalized healthcare *Implementation of AI and machine learning technologies in medicine* Enrico Capobianco, Pietro Lio', Yuguang Wang, Jingjing You, Chris Hodge, Zhe He, 2023-08-23 *Biomedicine Examined* M. Lock, D. Gordon, 2012-12-06 The culture of contemporary medicine is the object of investigation in this book the meanings and values implicit in biomedical knowledge

and practice and the social processes through which they are produced are examined through the use of specific case studies. The essays provide examples of how various facets of 20th century medicine including education, research, the creation of medical knowledge, the development and application of technology, and day to day medical practice are pervaded by a value system characteristic of an industrial capitalistic view of the world in which the idea that science represents an objective and value free body of knowledge is dominant. The authors of the essays are sociologists and anthropologists in almost equal numbers; also included are papers by a social historian and by three physicians, all of whom have steeped themselves in the social sciences and humanities. This cooperative endeavor, which has necessitated the breaking down of disciplinary barriers to some extent, is perhaps indicative of a larger movement in the social sciences, one in which there is a searching for a middle ground between grand theory and attempts at universal explanations on the one hand, and the context specific empiricism and relativistic accounts characteristic of many historical and anthropological analyses on the other.

Ordinary Medicine Sharon R. Kaufman, 2015-05-29. Most of us want and expect medicine's miracles to extend our lives. In today's aging society, however, the line between life giving therapies and too much treatment is hard to see; it's being obscured by a perfect storm created by the pharmaceutical and biomedical industries along with insurance companies. In *Ordinary Medicine*, Sharon R. Kaufman investigates what drives that storm: more is better approach to medicine, a nearly invisible chain of social, economic, and bureaucratic forces that has made once extraordinary treatments seem ordinary, necessary, and desirable. Since 2002, Kaufman has listened to hundreds of older patients, their physicians, and family members express their hopes, fears, and reasoning as they faced the line between enough and too much intervention. Their stories anchor *Ordinary Medicine*. Today's medicine, Kaufman contends, shapes nearly every American's experience of growing older, and ultimately, medicine is undermining its own ability to function as a social good. Kaufman's careful mapping of the sources of our health care dilemmas should make it far easier to rethink and renew medicine's goals.

Medical Technology and the Social Kathryn Burrows, 2024-01-26. *Medical Technology and the Social* How Medical Technology is Impacting Social relations, Institutions, and Beliefs about what is Normal explores the intersection of society and medical technology to examine how medical technology impacts our day to day lives. The contributors examine a variety of technologies and their impact on the social world, from older technologies such as the use of fax machines in hospitals to cutting edge technologies such as Bluetooth enabled smart pills. Underlying each chapter is a consideration of what is normal, investigating such themes as power and social control, diffusion of technology, eco-crisis theory, the changing role of medical expertise, the embodiment of the fetus in utero, the history of prosthetics, and how technology has reformed conceptions of a normal body.

Life and Death Under High Technology Medicine Ian Robinson, 1994. The proceedings of a colloquium at Brunel, the University of West London, at which British, American, Canadian, and Australian scholars and practitioners of specialized fields reflect on how developments at the frontiers of medicine are challenging conventional ideas about when life begins and ends, and about the possibilities

between The 16 papers go beyond the ethical dilemmas for individuals to consider how high technology medicine is changing our understanding of the nature of kinship social life and cultural identity through such practices as the new genetics and organ transplants Distributed by St Martin s Annotation copyright by Book News Inc Portland OR
