Technological Lag And Intellectual Background Problems Of Transition In East Central Europe:

Technological Lag and Intellectual Background János Kovács, 1995 Deals with the difficulties encountered by economies in transition particularly those in Central and Eastern Europe Such countries hoped that by abandoning state planning they would achieve a rapid improvement in their standard of living but their experience has been the reverse *Barriers to International Technology Transfer* J. Kirkland, 1996-11-30 The importance of technology transfer to innovation and wealth creation is now recognised by most governments As the policy debate has intensified however it has become clear that the problem of encouraging successful transfer is complex and requires an interdisciplinary approach The collection of papers in this volume is deliberately diverse It offers perspectives from economics sociology science engineering and public administration and also from outside academic life from those involved at the sharp end of technology licensing and administering government research programmes Contributions are also drawn from a range of national backgrounds the authors are drawn from ten countries from throughout Europe and North America The main focus for the papers was a NATO Advanced Study Workshop which took place at the National Institute of Economic and Social Research London in September 1995 Unfortunately time and space has prevented all of the contributions appearing here but all those who attended played an important role in making the event such a success Thanks are also due to Dr Alain Jubier and his colleagues at NATO without whose support and advice the seminar could not have taken place to my fellow organising committee members Dr Katalin Balazs Dr Linda Parker and Professor Steve Woolgar and to Monica Miglior who in addition to assisting in the conference organisation provided detailed notes on sessions which helped greatly in later analysis *The Digital Flood* James W. Cortada, 2012-09-27 The history of how computers spread to over 20 nations globally in less than six decades exploring economic political social and technological reasons and consequences It is based on extensive research into primary and secondary sources and concludes with a discussion of implications for key players in the globalized economy

Global Perspectives on the Internationalization of Higher Education Branch, John D., Durnali, Mehmet, 2023-02-24 Transnational higher education was triggered largely by the marketization of higher education which itself manifests in such characteristics as academic rankings institutional branding and an emphasis on managerialism Recent advances in technology and the global COVID 19 pandemic have also driven a virtual internationalization of higher education with universities expanding their digital footprints overseas accelerating their distance education offerings and exploring such innovations as virtual exchange programs *Global Perspectives on the Internationalization of Higher Education* documents contemporary perspectives on the internationalization of higher education and considers its history throughout the years in order to understand potential future directions Covering key topics such as student recruitment institutional branding and student mobility this premier reference source is ideal for administrators principals researchers academicians practitioners scholars instructors and students *Skill Acquisition and Firm Creation in Transition Economies* Ms. Zuzana Brixiova, Wenli

Li,Tarik Yousef,1999-09-01 The transition from plan to market has hinged on the development of a dynamic private sector that would serve as the engine of growth and employment creation This paper examines the link between the availability of skilled workers and the creation of new private firms Using a dynamic search model it shows how the lack of skilled workers inhibits entrepreneurship and depresses the rate of firm creation slowing the recovery of aggregate output and labor productivity during the transition The paper also shows how policies designed to encourage skill acquisition by workers have a positive impact on the economy **The ^ADigital Flood** Dr. James W. Cortada,2013-02-01 In this book historian James W Cortada provides the first world wise history of how computers appeared and spread to over twenty nations in less than six decades It explores economic political social and technological reasons and consequences It is based on extensive research into primary and secondary sources and concludes with a discussion of implications for key players in the globalized economy
