Technologies for Rainfed Agriculture in Mediterranean Climates Peter Oram, C. de Haan, 1995-01-01 This report describes the results of a survey of 1 000 multinational corporations undertaken in 1992 which asked about the importance of environmental issues in investment decisions The survey shows that most large corporations look systematically at environmental questions when they decide where to invest Environmental problems appear to have discouraged a number of investments across different industries and the question of liability for past pollution problems at industrial sites was the greatest concern for investors *World Bank Lending for Small Enterprises, 1989-1993* Leila Webster, Randall Riopelle, Anne-Marie Chidzero, 1996 Addresses the issue of international competitiveness from the perspective of developing countries which must exploit the opportunities offered by international trade and the extraordinarily rapid technological progress of recent years The book's central message is that while sound macroeconomic management is crucial for achieving a sustained rise in living standards it is an economy's ability to generate and manage technological change that ultimately determines its success in the world market and the pace at which it grows The Impact of Environmental Assessment, 1997-01-01 China is in the throes of two transitions from a command economy to a market based one and from a rural agricultural society to an urban industrial one So far both transitions have been spectacularly successful China is the fastest growing economy in the world with per capita incomes more than quadrupling since 1978 achieving in two generations what took other countries centuries Although swift growth and structural change have resolved many problems they also have created new challenges employment insecurity growing inequality stubborn poverty mounting environmental pressures rising costs of food self sufficiency and periods of macroeconomic instability stemming from incomplete reforms Unmet these challenges could undermine the sustainability of growth and China's promise could fade China 2020 a seven volume set examines China's recent history where it is today and the path it should follow during the first two decades of the 21st century The volume in the set entitled Old Age Security Pension Reform in China highlights two severe difficulties with China's current pension system the urgent and immediate problem of the pension burden placed on state owned enterprises and the longer term predicament arising from a rapidly aging population State enterprises inherited heavy pension obligations from the central planning era With the transition to a market economy employment in the state enterprise sector is declining while the number of pensioners is rising rapidly The study recommends a unified pension system that includes both mandatory funded individual accounts and a social insurance scheme It also endorses a sustainable contribution rate that attaches considerable importance to long term financial viability more than 60 years and examines the risks associated with low compliance rates and low interest rates Biodiversity and Agriculture Jitendra Srivastava, Nigel J.
