Technology And Culture:

Technology and Culture, 2000 **Leonardo to the Internet** Thomas J. Misa, 2011-05-16 Historian Thomas J. Misa's sweeping history of the relationship between technology and society over the past 500 years reveals how technological innovations have shaped and have been shaped by the cultures in which they arose. Spanning the preindustrial past, the age of scientific, political, and industrial revolutions, as well as the more recent eras of imperialism, modernism, and global security, this compelling work evaluates what Misa calls the question of technology. Misa brings his acclaimed text up to date by examining how today's unsustainable energy systems, insecure information networks, and vulnerable global shipping have helped foster geopolitical risks and instability. A masterful analysis of how technology and culture have influenced each other over five centuries, *Leonardo to the Internet* frames a history that illuminates modern-day problems and prospects faced by our technology-dependent world. Praise for the first edition: Closely reasoned, reflective, and written with insight, grace, and wit, Misa's book takes us on a personal tour of technology and history, seeking to define and analyze paradigmatic technocultural eras. *Technology and Culture* follows Thomas Hughes's model of combining an engaging historical narrative with deeper lessons about technology. American Scholar His case studies, such as that of Italian futurism or the localizations of the global McDonalds, provide good starting points for thought and discussion. *Journal of Interdisciplinary History* This review cannot do justice to the precision and grace with which Misa analyzes technologies in their social contexts. He convincingly demonstrates the usefulness of his conceptual model. *History and Technology* A fascinating, informative, and well-illustrated book. **Choice**

Human-Built World Thomas P. Hughes, 2005-05-13 To most people, technology has been reduced to computers, consumer goods, and military weapons; we speak of technological progress in terms of RAM and CD-ROMs and the flatness of our television screens. In *Human Built World*, thankfully, Thomas Hughes restores to technology the conceptual richness and depth it deserves by chronicling the ideas about technology expressed by influential Western thinkers who not only understood its multifaceted character but who also explored its creative potential. Hughes draws on an enormous range of literature, art, and architecture to explore what technology has brought to society and culture and to explain how we might begin to develop an ecotechnology that works with, not against, ecological systems. From the Creator model of development of the sixteenth century to the big science of the 1940s and 1950s to the architecture of Frank Gehry, Hughes nimbly charts the myriad ways that technology has been woven into the social and cultural fabric of different eras and the promises and problems it has offered. Thomas Jefferson, for instance, optimistically hoped that technology could be combined with nature to create an Edenic environment. Lewis Mumford, two centuries later, warned of the increasing mechanization of American life. Such divergent views, Hughes shows, have existed side by side, demonstrating the fundamental idea that in its variety, technology is full of contradictions, laden with human folly, saved by occasional benign deeds, and rich with unintended consequences. In *Human Built World*, he offers the highly engaging history of these contradictions, follies, and consequences. a

history that resurrects technology rightfully as more than gadgetry it is in fact no less than an embodiment of human values
