Griffiths,Graham Sewell,2010 The Semantics of Grammatical Dependencies argues that constraints of interaction from semantic evaluations enforce grammatical dependency patterns that recur across natural languages and within constructions at intra and inter sentential levels as well as discourse levels The book develops along three lines Firstly a handle is gained on why languages are structured around localities with localities functioning as actions of reset to permit the reuse of grammatical resources that maintain a fixed semantic contribution Secondly sensitivity is brought to the linear and hierarchical placement of scope information to capture ordering effects like accessibility crossover and intervention Thirdly an interestingly different perspective is reached on what it means to be grammatical rather than being a destructive feature that bans or filters out bad structure grammaticality takes on a role of constructive guidance that keeps languages to what are generally unambiguous canonical forms that moreover guarantee required dependencies The book will be of

interest to advanced undergraduate students post graduate and research students and all researchers in the formal analysis of the syntax semantics and pragmatics of natural language
