Technology As Experience:

Technology as Experience John McCarthy, Peter Wright, 2007-08-24 In *Technology as Experience* John McCarthy and Peter Wright argue that any account of what is often called the user experience must take into consideration the emotional intellectual and sensual aspects of our interactions with technology. We don't just use technology; they point out we live with it. They offer a new approach to understanding human computer interaction through examining the felt experience of technology. Drawing on the pragmatism of such philosophers as John Dewey and Mikhail Bakhtin, they provide a framework for a clearer analysis of technology as experience. Just as Dewey in *Art as Experience* argued that art is part of everyday lived experience and not isolated in a museum, McCarthy and Wright show how technology is deeply embedded in everyday life. The zestful integration or transcendent nature of the aesthetic experience, they say, is a model of what human experience with technology might become. McCarthy and Wright illustrate their theoretical framework with real world examples that range from online shopping to ambulance dispatch. Their approach to understanding human computer interaction, seeing it as creative, open, and relational, part of felt experience, is a measure of the fullness of technology's potential to be more than merely functional.

Experience with Technology Ali al-Azzawi, 2013-09-16 With a focus on gaining an empirically derived understanding of the underlying psychological dimensions and processes behind people's experiences with technology, this book contributes to the debate of user experience (UX) within several disciplines including HCI design and marketing. It analyses UX dynamics at various time scales and explores the very nature of time and meaning in the context of UX. *Experience with Technology* uses personal construct theory (PCT) as a theoretical and methodological starting point for this project. Major case studies are described that examine people's experiences with mobile media devices. The results show a group of superordinate constructs that upon interaction undergo a change in the way they vary and relate to each other as well as the development of a high reliability UX Scale. The book concludes by proposing the ICE Interaction Construction and Evaluation model of UX that consolidates its findings into a workable framework of UX. The proposed framework will be of particular use to designers and practitioners and forms an empirically grounded starting point for further research.

Advances in Usability, User Experience, Wearable and Assistive Technology Tareq Z. Ahram, Christianne S. Falcão, 2021-07-07 This book addresses emerging issues in usability, interface design, human computer interaction, user experience, and assistive technology. It highlights research aimed at understanding human interactions with products, services, and systems and focuses on finding effective approaches for improving the user experience. It also discusses key issues in designing and providing assistive devices and services for individuals with disabilities or impairment, offering them support with mobility, communication, positioning, environmental control, and daily living. The book covers modeling as well as innovative design concepts with a special emphasis on user-centered design and design for specific populations, particularly the elderly. Further topics include virtual reality, digital environments, gaming, heuristic evaluation, and forms of device.
