**Money Machines** Mark Coeckelbergh, 2016-03-09 While we have become increasingly vulnerable to the ebb and flow of global finance most of us know very little about it This book focuses on the role of technology in global finance and reflects on the ethical and societal meaning and impact of financial information and communication technologies ICTs Exploring the history metaphysics and

geography of money algorithms and electronic currencies the author argues that financial ICTs contribute to impersonal disengaged placeless and objectifying relations and that in the context of globalization these distancing effects render it increasingly difficult to exercise and ascribe responsibility Caught in the currents of capital it seems that both experts and lay people have lost control and lack sufficient knowledge of what they are doing There is too much epistemic social and moral distance At the same time the book also shows that these electronically mediated developments do not render global finance merely virtual for its technological practices remain material and place bound and the ethical and social vulnerabilities they create are no less real Moreover understood in terms of technological practices global finance remains human through and through and there is no technological determinism Therefore Money Machines also examines the ways in which contemporary techno financial developments can be resisted or re oriented in a morally and socially responsible direction not without but with technology As such it will appeal to philosophers and scholars across the humanities and the social sciences with interests in science and technology finance ethics and questions of responsibility
