Technology And National Competitiveness:

Technology and National Competitiveness Jorge Niosi, 1991-04-01 The first part of the collection reassesses and elaborates on Nobel Prize winner Wassily Leontief's input output model and makes use of Michael V Posner's technology gap trade theory to examine international trade and import export factor intensity The contributors clearly isolate technology as a crucial factor in the foreign commerce of Canada the US and other industrial nations The second part provides the theoretical background revealing the importance of the industrialized state's ability to affect international trade by implementing technology policy The third part analyses the role of government strategy in the development of technology in less industrialized nations faced with a fluctuating world economy and rapid technological change The fourth part re-evaluates Shumpeterian theory addressing the market determinants of technological change such as market structure corporate strategy and the size of corporations The contributors to this volume are Bernard Bonin Francois Chesnais Lester A Davis Christian DeBresson Giovanni Dosi Faye Duchin Philippe Faucher K E Hamilton Thomas Hatzichronoglou Lynn Krieger Mytelka Jorge Niosi Jacques Perrin and Luc Soete

Multinationals, Technology, and National Competitiveness

Marina Papanastassiou, Robert D. Pearce, 1999 Examines the effects of multinationals on the competitiveness of industry in the UK showing how these firms gain access to technology and questioning whether multinationals improve the potential and competitiveness of local industry Discusses theories of multinationals then examines what these theories imply for efficiency and welfare and looks at policies which affect multinationals Examines the role of multinationals in the UK and the role of decentralized research and development in multinationals *Department of Energy National Competitiveness Technology Partnership Act of 1993* United States. Technology, Culture, and Competitiveness Michael Talalay, Chris Farrands, Roger Tooze, 1997 The contributors look at the causes and consequences of rapid technological change in an increasingly globalised world They discuss how technology relates to political and economic change how it affects our culture and how culture affects technology

Strengthening corporate and national competitiveness through technology, 1992 *The Societal Foundations of National Competitiveness* Michael J. Mazarr, 2022-06-21 Nations rise and fall succeed or fail in rivalries and enjoy stability or descend into chaos because of a complex web of factors that affect competitive advantage One critical component is the package of essential social characteristics of a nation The ultimate story of the Cold War is that the United States was simply a more competitive society than the Soviet Union more energetic more vibrant more innovative more productive more legitimate Through analysis of comparative studies of historical eras and trends historical case studies and the findings of issue specific empirical research the report explores how seven characteristics of a society determine its competitive standing and distinguish dynamic and competitively successful nations If the history surveyed in this report provides an accurate guide to the future the fate of the United States in today's rivalries will not be determined solely or even in significant degree by the numbers of its weapons or amounts of defense spending or how many proxy wars it wins but by the basic characteristics of its society The author applies the seven leading characteristics that affect national standing to the United States to create a snapshot of where the country stands That application provides some reason for optimism The United States continues to reflect many of these characteristics and the overall synergistic engine more than any other large country in the world However multiple trends are working to weaken traditional U S advantages Several such as the corruption of the national information space pose acute risks to the long term dynamism and competitiveness of the nation raising the worrying prospect that the United States has begun to display classic patterns of a major power on the far side of its dynamic and vital curve **The Technological Dimensions of International Competitiveness** National Academy of Engineering. Committee on Technology Issues that Impact International Competitiveness, 1988 **Congressional Record** United States. Congress, 1993 The Congressional Record is the official record of the proceedings and debates of the United States Congress It is published daily when Congress is in session The Congressional Record began publication in 1873 Debates for sessions prior to 1873 are recorded in The Debates and Proceedings in the Congress of the United States 1789 1824 the Register of Debates in Congress 1824 1837 and the Congressional Globe 1833 1873 **Global Innovation/national Competitiveness** Harold Brown, 1996 *Technology and Economic Development* Edward J. Malecki, 1997 Continues to provide an excellent coverage on the effects of technological change on economic growth and development The text retains its international focus together with a broad coverage of the activities which constitute technological innovation **The Dynamics of Knowledge Regimes** Dengjian Jin, 2001 This work provides the reader with a series of sectoral and comparative insights into the new world of national competitiveness with particular reference to the US and Japan It also provides a synthesis of emerging fields around knowledge and evolutionary thought The author demonstrates the role of cultural factors in co evolutionary processes and investigates why different countries consistently perform very differently from one sector to another in the international market for technologies The book offers an integrated

framework for understanding how different national learning patterns affect innovation and a perspective on the dynamic interaction and co evolution of culture technology institutions and governance American Technology Policy J. D. Kenneth Boutin, 2013 Balancing the requirements of national security and economic competitiveness *National Competitiveness and Economic Growth* Timo J. Hämmäläinen, 2003 The current paradigm shift in the world economy is challenging the traditional competitiveness and growth theories with their few explanatory variables This book offers a more holistic framework to synthesise the key findings of the various branches of competitiveness and growth research The author illustrates this framework with a new long wave theory of socio economic development This theory emphasises the competitiveness and growth benefits of rapid structural adjustment in the rapidly changing techno economic environment Based on thorough analysis the author argues that both markets and governments have become less efficient due to the current transformation of the world economy His empirical data from 22 OECD countries in the 1980s and 1990s illustrates that efficiency and growth oriented governments have significantly contributed to their countries economic success *National Competitiveness and Economic Growth* will furnish its readers with a better understanding of the interdependencies of many important but seemingly unrelated aspects of modern economies and societies for example the dynamics of business and technology and cultural and institutional change It will appeal to economists business professionals and policymakers with a special interest in the competitiveness and growth of firms and national economies as well as the long term development of socio economic systems
