Emerging Technologies and Ethical Issues in Engineering

National Academy of Engineering, 2004-10-02 Engineers and ethicists participated in a workshop to discuss the responsible development of new technologies. Presenters examined four areas of engineering sustainability: nanotechnology, neurotechnology, and energy in terms of the ethical issues they present to engineers in particular and society as a whole. Approaches to ethical issues include analyzing the factual, conceptual, application, and moral aspects of an issue; evaluating the risks and responsibilities of a particular course of action; and using theories of ethics or codes of ethics developed by engineering societies as a basis for decision making. Ethics can be built into the education of engineering students and professionals either as an aspect of courses already being taught or as a component of engineering projects to be examined along with research findings. Engineering practice workshops can also be effective, particularly when they include discussions with experienced engineers. This volume includes papers on all of these topics by experts in many fields. The consensus among workshop participants is that material on ethics should be an ongoing part of engineering education and engineering practice.

Digitization of Economy and Society Sudeshna Basu Mukherjee, Saheli Guha Neogi, Ghatak, Nilanjan Ray, 2021-10-20 This new volume looks at a selection of important issues resulting from the digitization of society which has fundamentally transformed organizations. The diverse topics include the societal impact of digitization on gender issues, virtual relationships, e-government, online privacy, the gig economy, using Uber as an example, work-life changes, online education, online media, health, public service, advertisements, loneliness of the elderly, and more. This book is essential reading for students and faculty of social sciences, economics, and management technology to understand the broad dimensions of digitization in our everyday life and the theoretical and practical utilization and outcome of digitization. , *Human Factors, Business Management and Society*

The Engineering-Business Nexus Steen Hyldgaard Christensen, Bernard Delahousse, Christelle Didier, Martin Meganck, Mike Murphy, 2018-11-14 Fascinating and compelling in equal measure this volume presents a critical examination of the multilayered relationships between engineering and business In so doing the study also stimulates ethical reflection on how these relationships either enhance or inhibit strategies to address vital issues of our time In the context of geopolitical economic and environmental tendencies the authors explore the world that we should want to create and the role of the engineer and the business manager in this endeavor Throughout this volume the authors identify periods of alignment and periods of tension between engineering and business They look at focal points of the engineering business nexus related to the development of capitalism The book explores past and present movements to reshape reform or reject this nexus The volume is informed by questions of importance for industry as well as for higher education These are What kinds of conflict arise for engineers in their attempts to straddle both professional and organizational commitments How should professionals be managed to avoid a clash of managerial and professional cultures How do engineers create value in firms and corporations What kinds of tension exist between higher education and industry What challenges does the neoliberal entrepreneurial university pose for management faculty students society and industry Should engineering graduates be ready for work and can they possibly be What kinds of business issues are reflected in engineering education curricula and for what purpose Is there a limit to the degree of business hybridization in engineering degree programs and if so what would be the criterion for its definition Is there a place in engineering education curricula for reflective critique of assumptions related to business and economic thinking One ideal of management and control comes to the fore as the

Anthropocene the world transformed into an engineered artefact which includes human existence The volume raises the question as to how engineering and business together should be considered given the fact that the current engineering business nexus remains embedded within an economic model of continual growth By addressing macro level issues such as energy policy sustainable development globalization and social justice this study will both help create awareness and stimulate development of self knowledge among practitioners educators and students thereby ultimately addressing the need for better informed citizens to safeguard planet Earth as a human life supporting system **Commercializing**
