## **Technology And The Limitation Of International Conflict:**

**Contributions of Technology to International Conflict Resolution** H. Chestnut, 2014-06-28 This book investigates technology's potential for stimulating and strengthening approaches that can lead to the peaceful solution of international conflicts. It discusses the causes of war, the political and social implications of neighbourhood and international involvement, and evaluates various aid programmes. Models are applied to methods of mediation and simulating power distribution and decision making to show how modern technology can be used to promote resolution in the event of conflict. **Proceedings of the Conference on Technology-Based Confidence Building: Energy and Environment**, 1989. The Limitations of the Law of Armed Conflicts: New Means and Methods of Warfare Pablo Antonio Fernández-Sánchez, 2022-05-09 In the law of armed conflicts, one of the elements that has changed the most has been the means and methods of warfare. Yet there are few legal answers for the many questions these changes pose. This volume therefore seeks to identify the limitations of current international law on this double plane: the means and methods of combat, and to offer insights about how to address them. Topics include the use of nuclear energy, which without being a weapon, can have the same effect as one; chemical and biological weapons; autonomous artificial intelligence weapons; and biobots. Similarly, fake news, the hostile use of cyberspace, lawfare, the use of big data, terrorism as a combat method, premeditated poisoning, sexual humiliation, the impact of such news on the armed forces, and the reorganization needed to face the new scenarios are all situations not contemplated in classical law and which require new legal and operational responses. **Bulletin of the Atomic Scientists**, 1989-05.

Sechser, Neil Narang, Caitlin Talmadge, 2021-11-28 Technology has always played a central role in international politics; it shapes the ways states fight during wartime and compete during peacetime. Today, rapid advancements have contributed to a widespread sense that the

world is again on the precipice of a new technological era Emerging technologies have inspired much speculative commentary but academic scholarship can improve the discussion with disciplined theory building and rigorous empirics This book aims to contribute to the debate by exploring the role of technology both military and non military in shaping international security Specifically the contributors to this edited volume aim to generate new theoretical insights into the relationship between technology and strategic stability test them with sound empirical methods and derive their implications for the coming technological age This book is very novel in its approach It covers a wide range of technologies both old and new rather than emphasizing a single technology Furthermore this volume looks at how new technologies might affect the broader dynamics of the international system rather than limiting the focus to a stability The contributions to this volume walk readers through the likely effects of emerging technologies at each phase of the conflict process The chapters begin with competition in peacetime move to deterrence and coercion and then explore the dynamics of crises the outbreak of conflict and war escalation in an environment of emerging technologies The chapters in this book except for the Introduction and the Conclusion were originally published in the Journal of Strategic Studies

Today however the threat landscape is significantly more complex. Alongside ever more sophisticated nuclear weapons arsenals, contemporary threats include cyberwarfare, anti-satellite weapons, robotic drones and advanced conventional weapons. To deal with the new threat environment, the Pentagon identified five operational domains: land, sea, air, space and cyberspace. The resulting model is an integrated, flexible regime that is able to deter threats across domains. In this volume, a leading cast of scholars and national security practitioners explore the logic and application of cross-domain deterrence in theory and practice.
