The Making of Green Engineers Andrew Jamison, 2013 This book discusses the ways in which engineering educators are responding to the challenges that confront their profession On the one hand there is an overarching sustainability challenge the need for engineers to relate to the problems brought to light in the debates about environmental protection resource depletion and climate change There are also a range of societal challenges that are due to the permeation of science and technology into ever more areas of our societies and everyday lives and finally there are the intrinsic scientific and technological challenges stemming from the emergence of new fields of technosciences that mix science and technology in new combinations In the book the author discusses and exemplifies three contending response strategies on the part of engineers and engineering educators a commercial strategy that links scientists and engineers into networks or systems of innovation an academic strategy that reasserts the traditional values of science and engineering and an integrative strategy that aims to combine scientific knowledge and engineering skills with cultural understanding and social responsibility by fostering what the author terms a hybrid imagination Professor Jamison combines scholarly analysis with personal reflections drawing on over forty years of experience as a humanist teaching science and engineering students about the broader social political and cultural contexts of their fields The book has been written as part of the Program of Research on Opportunities and Challenges in Engineering Education in Denmark PROCEED funded by the Danish Strategic Research Council for which Professor Jamison has served as coordinator

Anticipatory Policymaking Rob A. DeLeo, 2015-09-16 Public policy analysts and political pundits alike tend to describe the policymaking process as a reactive sequence in which government develops solutions for clearly evident and identifiable problems. While this depiction holds true in many cases, it fails to account for instances in which public policy is enacted in anticipation of a potential future problem. Whereas traditional policy concerns manifest themselves through ongoing harms, anticipatory problems are projected to occur sometime in the future, and it is the prospect of their potentially catastrophic impact that generates intense speculation and concern in the present. *Anticipatory Policymaking: When Government Acts to Prevent Problems and Why It Is So Difficult* provides an in-depth examination of the complex process through which United States government institutions anticipate emerging threats. Using contemporary debates over the risks associated with nanotechnology, pandemic influenza, and global warming as case study material, Rob A. DeLeo highlights the distinctive features of proactive governance. By challenging the pervasive assumption of reactive policymaking, DeLeo provides a dynamic approach for conceptualizing the political dimensions of anticipatory policy change. **Departments of Veterans Affairs and Housing and Urban Development, and Independent Agencies Appropriations for 1997** United States.
