Technology And Market Structure:

Technology and Market Structure John Sutton, 2001-01-26 John Sutton sets out a unified theory that encompasses two major approaches to studying market while generating a series of novel predictions as to how markets evolve Traditionally the field of industrial organization has relied on two unrelated theories the cross section theory and the growth of firms theory to explain cross industry differences in concentration and within industry skewness The two approaches are based on very different mathematical structures and few researchers have attempted to relate them to each other In this book John Sutton unifies the two approaches through a theory that rests on three simple principles The first two a survivor principle that says that firms will not pursue loss making strategies and an arbitrage principle that says that if a profitable opportunity is available some firm will take it suffice to define a set of possible outcomes The third the symmetry principle says that the strategy used by a new entrant into any submarket depends neither on the entrants identity nor on its history in other submarkets This allows researchers to bring together the roles of strategic interactions and of independence effects The result is that the considerations motivating the cross section tradition and those motivating the growth of firms tradition both drop out within a single game theoretic model This book follows Sutton's *Sunk Costs and Market Structure* published by MIT Press in 1991
